Advanced Topics in Artificial Intelligence Norman Foo, 2007-12-07 The 12th Australian Joint Conference on Artificial Intelligence AI QQ held in Sydney Australia 6-10 December 1999 is the latest in a series of annual regional meetings at which advances in artificial intelligence are reported. This series now attracts many international papers and indeed the constitution of the program committee reflects this geographical diversity. Besides the usual tutorials and workshops this year the conference included a companion symposium at which papers on industrial applications were presented. The symposium papers have been published in a separate volume edited by Eric Tsui. Ar99 is organized by the University of New South Wales and sponsored by the Australian Computer Society, the Commonwealth Scientific and Industrial Research Organisation, CSIRO Computer Sciences Corporation, the KRRU group at Griffith University, the Australian Artificial Intelligence Institute and Neuron Works Ltd. Ar99 received over 120 conference paper submissions of which about one-third were from outside Australia. From these 39 were accepted for regular presentation and a further 15 for poster display. These proceedings contain the full regular papers and extended summaries of the poster papers. All papers were refereed mostly by two or three reviewers selected by members of the program committee and a list of these reviewers appears later. The technical program comprised two days of workshops and tutorials followed by three days of conference and symposium plenary and paper sessions.

Prof Abubakar Sadiq HARUNA, Director, Institute of Africa Higher Education Research and Innovations, Maryam Abacha American University of Nigeria, Kano. **Proceedings of the Twenty-sixth SIGCSE Technical Symposium on Computer Science Education**, Cary Laxer, 1995. *Logical Foundations of Artificial Intelligence*, Michael R. Genesereth, Nils J. Nilsson, 1987. Intended both as a text for advanced undergraduates and graduate students and as a key reference work for AI researchers and developers, *Logical Foundations of Artificial Intelligence* is a lucid, rigorous, and comprehensive account of the fundamentals of artificial intelligence from the standpoint of logic. The first section of the book introduces the logicist approach to AI, discussing the representation of declarative knowledge and featuring an introduction to the process of conceptualization, the syntax and semantics of predicate calculus, and the basics of other declarative representations such as frames and semantic nets. This section also provides a simple but powerful inference procedure, resolution, and shows how it can be used in a reasoning system. The next several chapters discuss nonmonotonic reasoning, induction, and reasoning under uncertainty, broadening the logical approach to deal with the inadequacies of strict logical deduction. The third section introduces modal operators that facilitate representing and reasoning about knowledge. This section also develops the process of writing predicate calculus sentences to the metalevel to permit sentences about sentences and about reasoning processes. The final three chapters discuss the representation of knowledge about states and actions, planning, and intelligent system architecture. End of chapter bibliographic and historical comments provide background and point to other works of interest and research. Each chapter also contains numerous student exercises, with solutions provided in an appendix to reinforce concepts and challenge the learner. A bibliography and index complete this comprehensive work. Activities, Roseworthy Agricultural College.
