McDaniel,2006 The main objective of this research was to assess the seismic vulnerability of typical pre 1975 WSDOT prestressed concrete multi column bent bridges Additional objectives included determining the influence of soil structure interaction on the bridge assessment and evaluating the effects of non traditional retrofit schemes on the global response of the bridges Overall this research highlighted the vulnerability of non monolithic bridge decks and shear dominating bridge columns in pre 1975 WSDOT prestressed concrete multi column bent bridges as well as the importance of including soil structure interaction calibrating the force displacement characterization of the columns to experimental test data and detailed modeling of the bridges such as expansion joint girder interaction In the end the seismic assessment of bridges is a cost efficiency issue Each bridge is different therefore investing in improved analyses up front will enable an efficient use of the limited funds for bridge improvement resulting in a significant savings overall      **Optimizing Post-earthquake Lifeline System Reliability** William M.
