

Bacteria - Form and Function

"Use the descriptions in the text to label the bacterium images."

Many bacteria are surrounded by a thick **capsule**. The capsule can protect the cell from the immune system. Many bacteria that make us sick, like salmonella, have capsules.

Underneath the capsule is the **cell wall**. The cell wall provides additional support and protection.

Bacteria, like all cells, have a **cell membrane**. This membrane encloses the **cytoplasm** of the cell. The cell membrane regulates what comes in and out of the cell.

Bacteria do not have a nucleus. Instead, their DNA is found floating in the cytoplasm in an area called the **nucleoid region**.

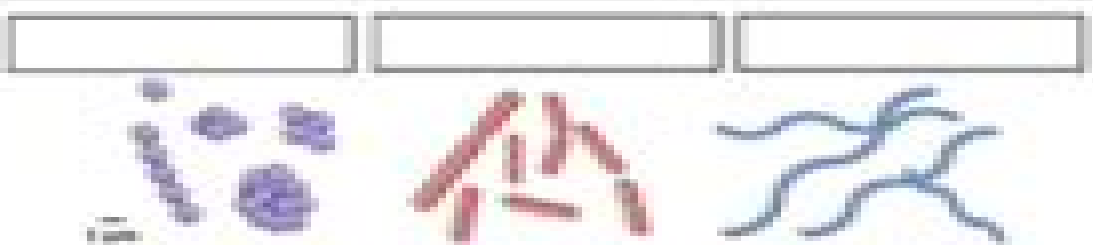

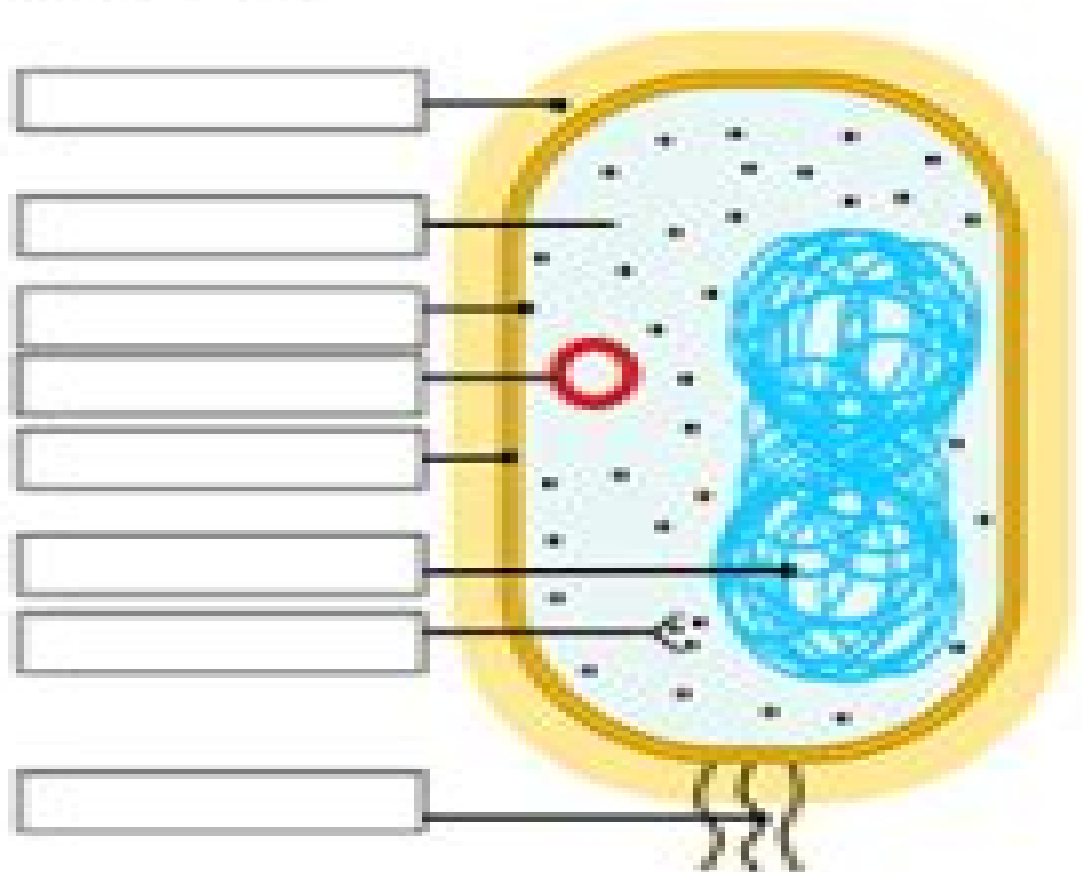

The **plasmid** is a circular DNA molecule that is involved in sexual reproduction. Plasmids also contain genes that are involved in antibiotic resistance.

Bacteria also have tiny **ribosomes** throughout the cytoplasm. They are responsible for making proteins that are used to build and maintain cell parts.

Some bacteria have **flagella** which enable them to move or stick to surfaces.

Bacteria are very tiny; most are about 1 μm in diameter. In comparison, the width of a human hair is about 70 μm .

Bacteria (prokaryotes) are also smaller than eukaryotic cells, like those found in plants and animals. The cells of animals are about 100 μm in diameter.

Brainpop Worksheet Bacteria Answers
