Quantitative Models for Value-Based Supply Chain Management Marcus Brandenburg, 2012-10-24 Supply chain management SCM strives for creating competitive advantage and value for customers by integrating business processes from end users through original suppliers. However, the question of how SCM influences the value of a firm is not fully answered. Various conceptual frameworks that explain the coherence of SCM and company value are comprehended as value-based SCM. These are well accepted in scientific research, but quantitative approaches to value-based SCM are found rather seldom. The book contributes to this research gap by proposing quantitative models that allow for assessing influences of SCM on the value of a firm. Opposed to existing models that limit the observation to chosen facets of SCM or selected value drivers, this holistic approach is adequate to reflect configurational and operational aspects of SCM, cover all phases of the product life cycle, financially compare value impacts of profitability-related and asset-related value drivers, and assess influences of dynamics and uncertainties on company value.

Agribusiness Julian Roche, 2019-08-06 Agribusiness offers a unique introduction to the business of agriculture: what agribusiness is, why it matters, what the role of technology is, how trade fits into the picture, what its key risks are, who is lending and investing, and why, and what returns they are getting. It is both practical in orientation, focusing on the role of managers in the industry as well as that of lenders and investors, and international in scope, drawing on case studies and interviews with key figures all over the world. The text ranges across various agricultural commodities to stress that there is no one-size-fits-all solution, and successful management, lending, or investment in agribusiness requires understanding specifics. Readers are introduced to the economics of the supply and demand of food, the role of agricultural trade, agricultural marketing, and farm management, along with key business aspects including main drivers of agribusiness value, principal risks of agribusinesses, agribusiness as an investment class, and agribusiness lending: why, who, and how. This engaging textbook offers a complete guide to the international business of agriculture, which is ideal for all students, scholars, and practitioners. A selection of eResources is also available to supplement this text, and instructors will find PowerPoint slides, discussion questions, case studies, and further teaching materials available to them.

Aviation Investment Doramas Jorge-Calderon, 2016-04-15 Aviation Investment uniquely addresses investment appraisal methods across the key industries that make up the aviation sector, including the airports, air traffic management, airline, and aircraft manufacturing or aeronautic industries. It is a practice-oriented book where methods are presented through realistic case studies. The emphasis is on economic appraisal or cost-benefit analysis in order to determine the viability of projects, not only for private investors but for society as a whole. Financial cash flow appraisal is illustrated alongside economic appraisal, as the latter builds on the former, but also to show how economic appraisal enhances standard financial appraisal to determine the long-term sustainability of any investment. Aviation is a capital-intensive sector that is growing rapidly, with world traffic expected to double over the next 15 years or so. A great deal of economic appraisal of investment projects takes place already.

as aviation is subject to government intervention through economic regulation and financial support and as both investors and policy makers seek to understand issues such as how environmental legislation may impact the viability of investments Both economic growth and welfare go hand in hand with sound investment decisions particularly regarding sectors such as aviation where investments are large and almost invariably debt financed Aviation Investment offers all aviation sub sectors a single source reference bringing together the theoretical background of the economic appraisal literature and aviation investment in practice It is written in a style that is accessible to non academic professionals using formulae only where strictly necessary to enable practical applications and benefits from the substantial practical experience of the author
