*Deontic Logic in Computer Science* Alessio Lomuscio, Donald Nute, 2004-08-17 This volume contains the workshop proceedings of DEON 2004 the Seventh International Workshop on Deontic Logic in Computer Science The DEON workshop series aims at bringing together researchers interested in topics related to the use of deontic logic in computer science It traditionally promotes research in the relationship between normative concepts and computer science artificial intelligence organisation theory and law In addition to these topics DEON 2004 placed special emphasis on the relationship between deontic logic and multi agent systems The workshop was held in Madeira Portugal on 26-28 May 2004 This volume includes all 15 papers presented at the workshop as well as two abstracts from the two outstanding invited speakers we were privileged to host Prof Mark Brown Syracuse University USA and Prof Mike Wooldridge University of Liverpool UK The reader will find that the topics covered span from theoretical investigations on deontic concepts and their formalisation in logic to the use of deontic formalisms to verify and reason about multi agent systems applications We believe this makes it a well balanced and interesting volume We wish to thank all those who contributed to this workshop and especially the authors of the submitted papers and the referees They were all forced to work on a very tight timescale to make this volume a reality

**Norms, Logics and Information Systems** Paul McNamara, Henry Prakken, 1999 This book presents research in an interdisciplinary field resulting from the vigorous and fruitful cross pollination between traditional deontic logic and computer science AI researchers have used deontic logic as one of the tools in modelling legal reasoning Computer scientists have discovered that computer systems including their interaction with other computer systems and with human agents can often be productively modelled as norm governed So for example deontic logic has been applied by computer scientists for specifying bureaucratic systems access and security policies and soft design or integrity constraints and for modelling fault tolerance In turn computer scientists and AI researchers have also discovered and made it clear to the rest of us that various formal tools e g nonmonotonic temporal and dynamic logics developed in computer science and artificial intelligence have interesting applications to traditional issues in deontic logic This volume presents some of the best work done in this area with the selection at once reflecting the general interdisciplinary and international character that this area of research has taken on as well as reflecting the more specific recent inter disciplinary developments between traditional deontic logic and computer science
