The Behaviour and Design of Steel Structures to EC3, Fourth Edition N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2007-11-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the fourth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of

EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process The Behaviour and Design of Steel Structures to EC3 is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries

Fire Design of Steel Structures

Jean-Marc Franssen, Paulo Vila Real, 2016-10-10 This book explains and illustrates the rules that are given in the Eurocodes for designing steel structures subjected to fire After the first introductory chapter Chapter 2 explains how to calculate the mechanical actions loads in the fire situation based on the information given in EN 1990 and EN 1991 Chapter 3 is dedicated to the models which represent the thermal actions created by the fire Chapter 4 describes the procedures to be used to calculate the temperature of the steelwork from the temperature of the compartment and Chapter 5 shows how the information given in EN 1993 1 2 is used to determine the load bearing capacity of the steel structure Chapter 6 presents the essential features that characterize the advanced calculation models for thermal and mechanical response The methods used to evaluate the fire resistance of bolted and welded connections are described in Chapter 7 Chapter 8 describes a computer program called Elefir EN which is based on the simple calculation model given in the Eurocode and allows designers to quickly and accurately calculate the performance of steel components in the fire situation Chapter 9 looks at the issues that a designer may be faced with when assessing the fire resistance of a complete building This is done via a case study and addresses most of the concepts presented in the previous chapters For this second edition the content has been revised and extended The book contains some new sections e g a comparison between the simple and the advanced calculation as well as additional examples

Unified Design of Steel Structures Louis F. Geschwindner, Judy Liu, Charles J. Carter, 2017 Unified Design of Steel Structures 3rd edition continues the unified LRFD and ASD approach to teaching structural steel design established in the first two editions It addresses the design of steel structures for buildings as governed by the ANSI AISC 360 16 Specification for Structural Steel Buildings published by the American Institute of Steel Construction AISC It is intended primarily as a text for a first course in steel design for civil and architectural engineers Such a course usually occurs in the third or fourth year of an engineering program The book can also be used in a second building oriented course in steel design depending on the coverage in the first course In addition to its use as a textbook it provides a good review for practicing engineers looking to learn the provisions of the latest specification or to convert their practice from any of the old specifications to the new specification Users are expected to have a firm knowledge of statics and strength of materials and have easy access to the AISC Steel Construction Manual 15th Edition All examples that rely on LRFD and ASD provisions are fully presented even if it means some duplication so that regardless of approach being taught there will be no need to refer to

the other approach example All homework problems that could be LRFD or ASD are presented both ways so that the instructor may choose the approach they want the student to follow Subjects addressed include principles of limit states design load factors resistance factors and safety factors tension member design column or compression member design beam or bending member design plate girder design design of beam columns or members subjected to combined axial load and bending bracing member design composite member design connection basics including bolts welds and connecting elements design of shear connections light bracing connections and direct bearing connections design of moment connections and basics of seismic design Unified Design of Steel Structures 3rd edition also features multi chapter problems and a new Integrated Design Project Instructors can add a few selected problems throughout the term or include a full project design of a four story office building Either way all of the tools are here to help students learn how to apply the AISC Specification to the design of a structural steel building Sample pages from the AISC Steel Construction Manual can be found throughout the book Students can easily reference design aids and quickly learn how to use them Keywords steel design beam design column design beam column design composite design connection design AISC *Steel Structures* Hassan Al Nageim,T.J.
