Statistical Case Studies Roxy Peck, Larry D. Haugh, Arnold Goodman, 1998-01-01 Statisticians know that the clean data sets that appear in textbook problems have little to do with real life industry data To better prepare their students for all types of statistical careers academic statisticians now strive to use data sets from real life statistical problems This book contains 20 case studies that use actual data sets that have not been

simplified for classroom use Each case study is a collaboration between statisticians from academe and from business industry or government This book is the result of a collaborative workshop of statisticians focusing on academic industrial partnerships The cases come from a wide variety of application areas including biology environment medical and health care pharmaceutical marketing and survey research and manufacturing

Design of Experiment Bradley Jones, Douglas C. Montgomery, 2019-11 There are several textbooks covering material in design of experiments DOE It is a fair question then to ask Why write another DOE textbook One answer is based on the observation that in 2018 over a quarter of the DOE courses taught at the university level rely on course notes rather than a text We view this as an evidence of pent up demand for a different kind of textbook than is currently available A characteristic of many DOE textbooks is that they focus as much or more on analysis than on design A student might get the impression that there is only one appropriate design for any scenario and this design should be orthogonal Orthogonal designs have the desirable feature that the analysis of the data generated after running the experiment is less demanding than the analysis of observational data
