Eagling, 1996 **Energy and Seismic Renovation Strategies for Sustainable Cities** Giuseppe Margani, 2019-06-11 The principle of sustainability should be strictly connected with safety since both aim to conserve resources in the case of sustainability the resources are typically thought of as environmental while in the case of safety the resources are basically human In spite of this common ground discussions on sustainability usually give insufficient attention to safety In the last years the EU has made large investments to increase the energy efficiency of the existing building stock paving the way for a low carbon future however less effort has been made to enhance its seismic resilience Therefore the safety and consequently the sustainability of towns situated in earthquake prone countries remain inadequate In such countries energy renovation actions should be combined with seismic retrofitting However a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions especially for multi owner housing and high rise buildings These barriers are of different kinds technical e.g. unfeasibility and or ineffectiveness of conventional retrofit solutions financial e.g. high renovation costs insufficient incentives subsidies organizational e.g. occupants disruption and relocation renovation consensus by condominium ownerships and cultural social insufficient information and skills lack of adequate policy measures for promoting renovation actions This book aims to overcome these barriers and to bridge the gap between sustainability and safety so to conserve both human and environmental resources **Semi-rigid Connections Handbook** Wai-Fah Chen, 2011 A practical and accessible introduction to the implementation of partially restrained connections in engineering practice *Advances in Structural Mechanics and Applications* José António Fonseca de Oliveira Correia, Satyabrata Choudhury, Subhrajit Dutta, 2022-06-02 The proceedings of the conference is going to benefit the
