even though the level of strategy use remained the same across the three grade levels In general females reported using more learning and study strategies and more anxiety during test taking situations while males reported lower academic motivation and more attention concentration difficulties Finally the AIMSweb Math Winter Benchmarks explained a statistically significant portion of the variance in performance on the WJ III and the TAKS Math Test Based on these results the SMALSI would be a useful screening tool for identifying students who require explicit instruction of learning and study strategies designed to enhance math achievement and the AIMSweb Math Winter Benchmarks would be a useful screening tool for identifying students at risk of academic difficulties in mathematics
