Scientific Computing in Electrical Engineering Angelo Marcello Anile, Giuseppe Ali, G. Mascali, 2007-01-10 This book is a collection of papers presented at the last Scientific Computing in Electrical Engineering SCEE Conference held in Sicily in 2004 The series of SCEE conferences aims at addressing mathematical problems which have a relevancy to industry The areas covered at SCEE 2004 were Electromagnetism Circuit Simulation Coupled Problems and General mathematical and computational methods

Efficient Design of Variation-Resilient Ultra-Low Energy Digital Processors Hans Reyserhove, Wim Dehaene, 2019-03-27 This book enables readers to achieve ultra low energy digital system performance The author's main focus is the energy consumption of microcontroller architectures in digital sub systems The book covers a broad range of topics extensively from circuits through design strategy to system architectures The result is a set of techniques and a context to realize minimum energy digital systems Several prototype silicon implementations are discussed which put the proposed techniques to the test The achieved results demonstrate an extraordinary combination of variation resilience high speed performance and ultra low energy

Proceedings, 1994 **Analog Layout Synthesis** Helmut E. Graeb, 2010-09-28 Integrated circuits are fundamental electronic components in biomedical automotive and many other technical systems A small yet crucial part of a chip consists of analog circuitry This part is still in large part designed by hand and therefore represents not only a bottleneck in the design flow but also a permanent source of design errors responsible for re designs costly in terms of wasted test chips and in terms of lost time to market Layout design is the step of the analog design flow with the least support by commercially available computer aided design tools This book provides a survey of promising new approaches to automated analog layout design which have been described recently and are rapidly being adopted in industry

VLSI Design Methodologies for Digital Signal Processing Architectures Magdy A. Bayoumi, 2012-12-06 Designing VLSI systems represents a challenging task It is a transposition among different specifications corresponding to different levels of design abstraction behavioral structural and physical The behavioral level describes the functionality of the design It consists of two components static and dynamic The static component describes operations whereas the dynamic component describes

sequencing and timing The structural level contains information about components control and connectivity The physical level describes the constraints that should be imposed on the floor plan the placement of components and the geometry of the design Constraints of area speed and power are also applied at this level To implement such multilevel transformation a design methodology should be devised taking into consideration the constraints limitations and properties of each level The mapping process between any of these domains is non isomorphic A single behavioral component may be transformed into more than one structural component Design methodologies are the most recent evolution in the design automation era which started off with the introduction and subsequent usage of module generation especially for regular structures such as PLA s and memories A design methodology should offer an integrated design system rather than a set of separate unrelated routines and tools A general outline of a desired integrated design system is as follows Decide on a certain unified framework for all design levels Derive a design method based on this framework Create a design environment to implement this design method

Rammig,Ron Waxman,1991 During the last decade the field of electronic design automation has changed from a small industry offering a random sampling of commercial and academic design automation tools to a significant industry comprising offerings ranging from individual tools to total design systems all based upon a set of emerging standards Workers in electronic design automation are active in the development of integrated design environments and therefore in the development of frameworks Frameworks for electronic design automation are rather similar to those for mechanical or software engineering however the class of tools may differ resulting in differing specific requirements for the services to be offered The present book documents the results of the 2nd Workshop on electronic design automation frameworks The question of standardization is of special interest within the book especially as related to VHDL EDIF PDES and CFI Also included are discussions of the role of specialized languages for specific environments and how the user community can help standards to evolve **Proceedings of the ... Lakes Symposium on VLSI. ,2005 *Modeling and Simulation for RF System Design* Ronny Frevert,Joachim Haase,Roland Jancke,Uwe Knochel,Peter Schwarz,Ralf Kakerow,Mohsen Darianian,2006-06-28 Modern telecommunication systems are highly complex from an algorithmic point of view The complexity continues to increase due to advanced modulation schemes multiple protocols and standards as well as additional functionality such as personal organizers or navigation aids To have short and reliable design cycles efficient verification methods and tools are necessary Modeling and simulation need to accompany the design steps from the specification to the overall system verification in order to bridge the

gaps between system specification system simulation and circuit level simulation Very high carrier frequencies together with long observation periods result in extremely large computation times and requires therefore specialized modeling methods and simulation tools on all design levels The focus of Modeling and Simulation for RF System Design lies on RF specific modeling and simulation methods and the consideration of system and circuit level descriptions It contains application oriented training material for RF designers which combines the presentation of a mixed signal design flow an introduction into the powerful standardized hardware description languages VHDL AMS and Verilog A and the application of commercially available simulators Modeling and Simulation for RF System Design is addressed to graduate students and industrial professionals who are engaged in communication system design and want to gain insight into the system structure by own simulation experiences The authors are experts in design modeling and simulation of communication systems engaged at the Nokia Research Center Bochum Germany and the Fraunhofer Institute for Integrated Circuits Branch Lab Design Automation Dresden Germany
