, 2012-12-31 Political and social forces exert pressure on our globalized economy in many forms from formal and informal policies to financial theories and technical models Our efforts to shape and direct these forces to preserve financial stability

reveal much about the ways we perceive the financial economy The Handbook of Safeguarding Global Financial Stability examines our political economy particularly the ways in which these forces inhabit our institutions strategies and tactics As economies expand and contract these forces also determine the ways we supervise and regulate This high level examination of the global political economy includes articles about specific countries crises and international systems as well as broad articles about major concepts and trends Substantial articles by top scholars sets this volume apart from other information sources Diverse international perspectives result in new opportunities for analysis and research Rapidly developing subjects will interest readers well into the future

The Governance of Macroprudential Policy Tracy C Maguze,2024-01-11 This book critically examines the theoretical foundations and legal framework for macroprudential policy its tools and governance in the UK the US and the EU It goes deeper into a normative discussion of the legitimacy of macroprudential policy in these jurisdictions where the mandate for maintaining financial stability has been delegated to independent authorities The Global Financial Crisis of 2007 2008 reopened debates regarding legitimacy of the independent regulatory state given its democratic deficit The response to a perceived legitimacy gap has been to increase political oversight in financial policymaking and regulation The book posits that the real problem is not a lack of democracy but rather a lack of social justice Across the globe there is growing dissatisfaction with a financial system and regulatory process that appear depersonalised and perpetuate inequalities Citizens are calling for more socially just systems of governance and the future success of financial policymakers and regulators will hinge on this Given the marked distributional effects that have been noted in some macroprudential policy tools the book questions whether macroprudential policy should be solely based on highly rationalised and strongly quantitative reasons By proposing that macroprudential policymakers should have a social justice mandate alongside their financial stability mandate as well as legal mechanisms for operationalising the added authority the book contributes to the growing discourse on the role of social justice in public policy

Time-Series Observations of Ocean Acidification: a Key Tool for Documenting Impacts on a Changing Planet Abed El Rahman Hassoun,Adrienne J. Sutton,Sam Dupont,Jose Martin Hernandez-Ayon,Xianghui Guo,2025-04-15 Ocean acidification is a global phenomenon with local effects Marine ecosystems are facing multiple stressors leading to significant changes Time series observations are the basis to understand these changes and distinguishing between natural and anthropogenic variability of physical chemical and biological components of marine environments Moreover field monitoring is often neglected as a tool to document the responses of marine organisms and key habitats to ocean acidification Time series observations of ocean acidification are thus critical to understanding the current threats that the ocean s ecosystems are witnessing and efficiently developing and implementing adaptation and mitigation solutions Time series dedicated to observing ocean acidification other stressors as well as biological parameters are the baseline for long term assessment of the ocean s health and for evaluating the efficiency of local and global actions toward

achieving climate targets Therefore the goal of this Research Topic is to highlight the latest research efforts conducted to document ocean acidification patterns and trends and their consequences on marine life In this issue we will focus on new and old time series stations efforts to bridge physical chemical and biological observations and their application for modeling and future projections

web 1 2 i the complex number system \mathbb{C} is a field for $n \geq 1$ \mathbb{C}^n is a vectorspace over \mathbb{C} so is an additive group but doesn't have a multiplication on it we can endow \mathbb{C}^n with a multiplication by $(a, b) \cdot (c, d) = (ac - bd, bc + ad)$ under this definition \mathbb{C}^n becomes a field denoted \mathbb{C}^n note that $(a, b)^{-1} = (a^2 + b^2)^{-1} (a, -b)$ is the multiplicative inverse of (a, b)
