Passive Acoustic Monitoring of Cetaceans Walter M. X. Zimmer, 2011-04-21 Passive acoustic monitoring is increasingly used by the scientific community to study survey and census marine mammals especially cetaceans many of which are easier to hear than to see PAM is also used to support efforts to mitigate potential negative effects of human activities such as ship traffic military and civilian sonar and offshore exploration Walter Zimmer provides an integrated approach to PAM combining physical principles discussion of technical tools and application oriented concepts of operations Additionally relevant information and tools necessary to assess existing and future PAM systems are presented with Matlab code used to generate figures and results so readers can reproduce data and modify code to analyse the impact of changes This allows the principles to be studied whilst discovering potential difficulties and side effects Aimed at graduate students and researchers the book provides all information and tools necessary to gain a comprehensive understanding of this interdisciplinary subject

Exploring Animal Behavior Through Sound: Volume 1 Christine Erbe, Jeanette A. Thomas, 2022-10-03 This open access book empowers its readers to explore the acoustic world of animals By listening to the sounds of nature we can study animal behavior distribution and demographics their habitat characteristics and needs and the effects of noise Sound recording is an efficient and affordable tool independent of daylight and weather and recorders may be left in place for many months at a time continuously collecting data on animals and their environment This book builds the skills and knowledge necessary to collect and interpret acoustic data from terrestrial and marine environments Beginning with a history of sound recording the chapters provide an overview of off the shelf recording equipment and analysis tools including automated signal detectors and statistical methods audiometric methods acoustic terminology quantities and units sound propagation in air and under water soundscapes of terrestrial and marine habitats animal acoustic and vibrational communication echolocation and the effects of noise This book will be useful to students and researchers of animal ecology who wish to add acoustics to their toolbox as well as to environmental managers in industry and government

Underwater Acoustic Modeling and Simulation Paul C. Etter, 2018-04-06 This newest edition adds new material to all chapters especially in mathematical propagation models and special applications and inverse techniques It has updated environmental acoustic data in companion tables and core summary tables with the latest underwater acoustic propagation noise reverberation and sonar performance models Additionally

Characterization of St. Lawrence Blue Whale Vocalizations and Their Correlation with Field Observations Catherine L. Berchok, 2004 Proceedings of the ... ACM International Workshop on Quality of Service & Security in Wireless and Mobile Networks, 2005 **Index to IEEE Publications** Institute of Electrical and Electronics Engineers, 1995 Issues for 1973 cover the entire IEEE technical literature **American Book Publishing Record**, 2005 Real Time Bottom Reverberation Simulation in Deep and Shallow Ocean Environments Thomas Edward Miller (S.M.), 2015 Due to the costs involved and time required to perform experiments at sea it is important to provide

accurate simulations of the ocean environment Using the ray tracing code BELLHOP the Mission Oriented Operating Suite MOOS methods outlined by the Naval Research Laboratory NRL for bottom reverberation and MATLAB a model will be developed to incorporate the effects of bottom reverberation into the BELLHOP suite of code This will be accomplished by using BELLHOP to generate a ray trace and eigen ray file Then a MATLAB script will take the BELLHOP information and calculate the reverberation level using the NRL model by measuring the amplitude and reverberation at a receiver array simulated on the ocean floor These reverberation values will then be used to determine the reverberation level at the source due to these bottom interactions Testing of the simulation will include deep and shallow ocean profiles and multiple sound speed profiles SSP Following this testing the goal is to implement the model in existing C code used for the testing of AUV systems The ability to accurately model the ocean will not only allow for testing of autonomy code in the laboratory but also make it possible to refine and calibrate code making ship time more efficient

MATLAB and Simulink Code Generation

F Marquez,2019-04-07 Generating code from MATLAB algorithms for desktop and embedded systems allows you to perform your software design implementation and testing completely within the MATLAB workspace You can Verify that your algorithms are suitable for code generation Generate efficient readable and compact C C code automatically which eliminates the need to manually translate your MATLAB algorithms and minimizes the risk of introducing errors in the code Modify your design in MATLAB code to take into account the specific requirements of desktop and embedded applications such as data type management memory use and speed Test the generated code and easily verify that your modified algorithms are functionally equivalent to your original MATLAB algorithms Generate MEX functions to Accelerate MATLAB algorithms in certain applications Speed up fixed poin MATLAB code Generate hardware description language HDL from MATLAB code To generate C C or MEX code from MATLAB algorithms you must install the following software MATLAB Coder product C C compiler When writing MATLAB code that you want to convert into efficient standalone C C code you must consider the following Data types C and C use static typing To determine the types of your variables before use MATLAB Coder requires a complete assignment to each variable Array sizing Variable size arrays and matrices are supported for code generation You can define inputs outputs and local variables in MATLAB functions to represent data that varies in size at run time Memory You can choose whether the generated code uses static or dynamic memory allocation With dynamic memory allocation you potentially use less memory at the expense of time to manage the memory With static memory you get better speed but with higher memory usage Most MATLAB code takes advantage of the dynamic sizing features in MATLAB therefore dynamic memory allocation typically enables you to generate code from existing MATLAB code without modifying it much Dynamic memory allocation also allows some programs to compile even when upper bounds cannot be found Static allocation reduces the memory footprint of the generated code and therefore issuitable for applications where there is a limited amount of available memory such aseembedded applications
