

Background: 54,000 U.S. women with the gene mutation, *BRCA1*, are at an elevated risk of developing breast and/or ovarian cancer. The purpose of this study was to determine the impact of genetic testing and counseling on the quality of life of women with the *BRCA1* mutation who are considering genetic testing. **Methods:** A cohort of 100 women with the *BRCA1* mutation who were considering genetic testing were recruited from a tertiary care center. The women were interviewed before and after genetic testing. The impact of genetic testing on the quality of life of the women was assessed using the *BRCA1* mutation carrier decision-making scale. **Results:** The women who were interviewed before and after genetic testing were significantly more likely to report a positive impact on their quality of life after genetic testing. **Conclusion:** Genetic testing and counseling can have a positive impact on the quality of life of women with the *BRCA1* mutation who are considering genetic testing.
