

Chapter 11 - Cardiovascular System Study Guide

1. What do we mean when we say the cardiovascular system is a closed system?

Closed system means blood stays within blood vessels.

2. Describe the structure/function of the three heart wall layers.

- 1. Epicardium: Outside layer; serous membrane**
- 2. Myocardium: Middle layer; mostly cardiac muscle**
- 3. Endocardium: Inner smooth layer**

3. What are the functions of atria? What are the functions of ventricles? Which has thicker myocardium and is responsible for generating high pressure in blood?

Functions of atria: Receives blood from body/lungs

Functions of ventricles: Sends blood to rest of body when contracts

Thicker myocardium causing high blood pressure: Ventricles

4. What are the two circuit pumps of the heart? What type of blood do they receive and where do they send blood to?

- 1. Pulmonary Circuit: Poor oxygenated blood; sends to lungs *RIGHT SIDE***
- 2. Systemic Circuit: Rich oxygenated; send to the rest of the body *LEFT SIDE***

5. What is the function of all heart valves?

Make sure blood flows in only one direction

6. What do we mean when we say the heart has an intrinsic conduction system?

It does not need neurons to tell the heart to contract each time; heart has its own cells to send electrical signals to the myocardium

Chapter 11 The Cardiovascular System Study Guide
