

Overview

The process of implementing SQL Server 2022 within the Red Hat OpenShift cluster is simple and straightforward. The SQL Server 2022 image has been customized to incorporate PolyBase, which facilitates the validation of potential use cases. PolyBase is not enabled by default and has been included in this custom image for data virtualization.

We have developed a customized image that includes the installation of PolyBase along with Microsoft SQL Server 2022 as shown below.

Change the image artifacts using the tag command.

Then push the newly created container image to container registry.

In this command, replace username with your `dockerhub.io` public container registry username. This container image can be pulled to run SQL Server 2022 with PolyBase pre-installed on any setup.

Mapping storage certificate with Openshift

The certificate must be mapped so that the Kubernetes cluster can communicate with the Elastic Cloud Storage deployment. This can be done using the Kubernetes ConfigMap, which maps the certificate to a SQL container.

The certificate must be mapped so that the OpenShift cluster can communicate with the Dell ObjectScale storage deployment. This can be done using the OpenShift ConfigMap, which maps the certificate to a SQL container.

Persistent volume claim creation

A PersistentVolumeClaim (PVC) is a request for storage by a user. It is like a Pod, as Pods consume node resources and PVCs consume PV resources. Pods can request specific resource amounts (CPU and Memory). Claims can request specific amounts of storage and can be mounted with ReadWriteOnce, ReadOnlyMany or ReadWriteMany access modes.

To provide persistent storage to a container or pod, a persistent volume claim is created using the RHODF storage class "ocs-storagecluster-cephfs". The following script provides an example of how to create a PVC that will be used by the SQL Server pods. This pvc yaml script creates a 500 GB volume in ReadWriteOnce access mode.

SQL Server 2022 secret creation

A Secret is an object that contains a small amount of sensitive data like a password, token, or key which might otherwise be put in a Pod specification or container image.
