Delphi represents a brand new way to develop applications for Windows. It combines the speed and ease of use of a visual development environment with the power, flexibility, and reusability of a fully object-oriented language, the world's fastest compiler, and leading-edge database technology.

As a result, Delphi lets you build sophisticated client/server applications in record time. Delphi includes support for creating stand-alone executable (.EXE) and dynamic-link library (.DLL) files and local or networked database applications, as well as client/server applications.

Installing Delphi

Delphi and its installation program are both Windows applications, so you must already have Windows running to install Delphi. The installation program creates directories as needed and copies files from the distribution disk to your hard drive.

The installation program is largely self-explanatory. The following steps tell you all you need to know to install Delphi.

- To install Delphi,
 - 1 Start Windows if it is not already running on your computer.
 - 2 Insert the Delphi CD into your CD-ROM drive.
 - 3 Use Program Manager's File | Run menu command or File Manager to run \INSTALL\SETUP.EXE from the Delphi CD.
 - 4 Follow the instructions presented by the installation program.

When the installation program finishes its work, it offers you the option of reading the README.TXT file, which contains important last-minute information about Delphi. It's a good idea to read README.TXT before running Delphi for the first time.
