Abstract *Spillover effects* occur when the effects of an intervention spread to individuals or groups not directly targeted by the intervention. This paper reviews the literature on spillover effects in the context of health communication interventions. Spillover effects are discussed in terms of their potential for both positive and negative outcomes, and the factors that influence the magnitude and direction of spillover effects. The paper also discusses the challenges of measuring spillover effects and the implications for the design and evaluation of health communication interventions.

There is a lot of legal research going on around the world on possible commercialization potential of biotechnology, but it's hard to find a good example of a company that has done it well.

Abstract background: There have been no systematic investigations of adult development, especially growth, in the family *Scaphiopus* of the genus *Scaphiopus*. In traditional constitutional growth literature, few reports on adult development, including growth and sexual maturity, go, providing total sufficient data for the study of development for *Scaphiopus* adults, including adults in various environments and habitats.

Management: The failure to provide the level of care is perhaps significant finding which provides alarming note for the future.
