but will be of use to high school students undergraduate students and of course lecturers Circuit theorems are applied to a
range of circuits and the calculations by hand after analysis are then compared to the simulated results The Laplace
transform and the s plane are used to analyze CR and LR circuits where transient signals are involved Here the Probe output
graphs demonstrate what a great learning tool PSpice is by providing the reader with a visual verification of any theoretical
calculations Series and parallel tuned resonant circuits are investigated where the difficult concepts of dynamic impedance
and selectivity are best understood by sweeping different circuit parameters through a range of values Obtaining
semiconductor device characteristics as a laboratory exercise has fallen out of favour of late but nevertheless is still a useful
exercise for understanding or modelling semiconductor devices Inverting and non inverting operational amplifiers
characteristics such as gain bandwidth are investigated and we will see the dependency of bandwidth on the gain using the
performance analysis facility Power amplifiers are examined where PSpice Probe demonstrates very nicely the problems of
cross over distortion and other problems associated with power transistors We examine power supplies and the problems of
regulation ground bounce and power factor correction Lastly we look at MOSFET device characteristics and show how these
