

# Choosing Parts For Building a PC

## A Quick/Beginner's Guide

### Motherboard

**Minimum:** \$60 range. Does the trick and is also inexpensive; for older CPU's.

**Middle of the Road:** \$60 to \$110. A step up from the minimum; many combos that include a CPU come in this price range.

**High-End:** \$100 to \$200. Good for a powerful game or video workstation. More speed and up-to-date; can handle the latest CPU technology.

**Extreme:** Over \$200. Bells and whistles. Things like multiple CPU sockets, extra memory slots, special cooling features, etc.

### CPU

**AMD:** Bang for your buck. More affordable, slightly less reliable in some aspects. Generally runs hotter than Intel, which can be a problem.

**Intel:** Expensive; reliable, runs cooler than AMD.

Your CPU should come with a "heat sink"—cooling fan—unless the specs say OEM, then you won't get one. You need it.

### Power Supply

**Minimum:** 300 watt power supply. Good for most instances.

**More:** Above 300 watt. For a computer with multiple video cards or hard-drives. Read hardware specs to find out if you need it.

### Ram/Memory

**2 GB:** At least. You don't mind waiting for things to load, and you don't open many windows/tabs at the same time.

**4GB:** Faster. Less waiting. "I'll be back."

**8GB:** Serious image/video editing, gaming. No noticeable performance changes above this benchmark.

### Graphics Card

**Cheap:** Up to \$125. No frills. Watch videos and do basic image editing.

**Middle of the Road:** Between \$150 and \$200; the tried and true price range. Safe and reliable performance.

**Extreme:** Over \$200. Need to do some serious gaming or image/video editing? Buy this.

### USB Ports

A **minimum** of four; mouse port, keyboard port, two extra. If you want multiple connections at the same time make sure your motherboard has the amount of ports needed.

### Optical Drive

**Basic:** Reads CD's and —hopefully— DVD's. Read the specs before you choose one.

**Advanced:** You want to: read DVD's, CD's, and Blue Ray; ability to burn some or all of the above; check specs to make sure it has options.

### Hard-Drive

**Minimum:** 150GB. Space for files as well as speed. Your computer slows down as you fill up your hard-drive.

**Better:** 300GB and above. Takes a long time to fill up and computer runs faster.

**Best:** Solid State. No moving parts. Available in combos with old technology for affordability. Very expensive.
