BUILDING CONSTRUCTION

Primary considerations

- Before starting a new construction project, check whether the area comes in an Earth Quake prone zone. While doing construction work safety measures should be taken for earth quake protection.
- The whole area of the building should be constructed at one time to avoid settlement in any portion of the building. If the construction is done in small portions, there may be chances of the settlement in foundation.
- Keep in mind the norms/rules of concerned area about building construction.
- Know about the authorities whose sanction is required to start the construction work.
- Know how much time it will take for getting the sanction.
- Search for a qualified architect or designer.
- Prepare the plan according to the area of the plot.
- Arrange structural drawing according to the type of soil.
- Know availability of the building materials, their quality and reputed material suppliers.
- See the availability of good quality of water and availability of electric connection.
- Access the labor/contractor for construction.
- Have knowledge about high flood level and the level of surrounding buildings and roads
- The site should be cleared if roots of the tree exists they should be removed up to 2 feet (60 cm.) below the ground level.
- Excavation for foundation should be done according to the designs and exact width and depth of the wall should be dug. If extra depth is made due to any reasons or any soft places found, those should be filled in with coarse sand or concrete.
- In case the water comes in trenches, it should be pumped out immediately.

Preliminary works to do before starting construction

Cleaning: Remove jungle from plot area. If there is any tree in the buildup area, un-rooted them completely. And remove from the plot area.

Levelling: Thoroughly level the ground. If there is any hole in the ground fill up that properly. Remove excess soil from the plot or fill up the plot by imported soil to take the ground to desired level, if required.

Fencing: Now plot area is cleaned and levelled. It is time to secure the plot area. It can be done by making permanent boundary wall or temporary fencing around plot. Temporary fencing is the more common way. Builder logo or company logo can be setup with fencing for branding. Also, safety signboard can be attached with fence.

Site office: Site office can be temporary or fixed depending on situation. If there is any driver's waiting room or visitor's waiting room or guest waiting room to build later then build that first to use as site office. But that is exceptional. The common practice in this case is temporary site office. . You should make a toilet which is separated from labor's toilet as you will have many vip-clients and visitors during construction period.

Store: The most essential thing in any construction site is store. To keep safe various building materials from un-wanted damage or stolen, make a store before starting construction. Make, a separate store
