

# Preventative Healthcare

## NURSE'S NOTES

Preventive healthcare is key to helping you stay healthy & provides early recognition of potential health problems.

Preventative care for adults includes screening for conditions like heart disease, diabetes, & cancer.

It's important to keep your vaccines current. Preventative counseling and scheduling routine medical & dental visits will also help both promote & maintain your health!

**GET  
REGULAR  
HEALTH  
SCREENINGS**

Some of the preventative care screenings for adults are: breast cancer, colorectal cancer, cervical cancer, prostate cancer, blood pressure, cholesterol, & diabetes.

Preventive care for children helps protect them from serious illnesses & can include screenings to detect behavioral conditions as well.

Preventative care recommended for children can include: routine wellness doctor's visits, vaccinations, behavioral & mental health screenings, & blood tests.

Learning about your family's health history is important! Being aware of a health condition that is in your family, can allow you to participate in health screenings that can detect the condition early. You can also be proactive about engaging in healthy lifestyle choices to prevent these conditions from developing or getting worse. One of the best things you can do for your health and well-being is to get screened for any serious conditions before they happen.

**Handbook of Health Promotion and Disease Prevention** James M. Raczynski, Ralph J. DiClemente, 2013-11-11 The idea for this volume developed when we were co-teaching our introductory master's level course in the Department of Health Behavior at the UAB School of Public Health a core course for all masters of public health students in the school regardless of the department in which they enrolled or the focus of their studies Hence in the course we sought to provide both students in our department as well as those who might not ever again take a health behavior course with an overview that would both truly represent the field and substantially provide educational research and public health practice benefits This was and continues to be a challenge with the diversity of students specializing in fields that include not only health behavior but also biostatistics environmental health sciences epidemiology health care organization and policy international health and maternal and child health The course that we taught attempted to provide the students with an overview of some of the important health promotion and disease prevention theories methods and policy issues while reviewing applications of these theories and methods to promoting health and preventing disease through a variety of channels for a variety of disease outcomes and among a variety of populations Since no one text provided this variety of readings we depended on readings and guest lectures Biomedical Index to PHS-supported Research, 1993 Cumulated Index Medicus, 1987 **Health Care Cost Containment** Beverly J.
