Mitchell, Mitchell Information Services, 1986      42 V-PowerNets Henning Wallentowitz, Christian Amsel, 2011-06-27 The efficiency of today's automobile PowerNets is limited and widely exhausted and the introduction of new systems is becoming more and more difficult. An offered remedy is the introduction of a new voltage level of 42 V. Within the scope of the EUROMOTOR symposium associated problems were discussed and special methods for the solution were presented. The book describes current as well as futuristic fusing and protection concepts of vehicle PowerNets. It presents the introduction of a new 42 V PowerNet into automobiles: the description of components and fusing systems for wires and electrical loads; the treatment of problems such as short circuits and arcs as well as seizing preventive measures. By focusing on the substantial aspects, the book addresses developers such as practitioners who are active with automobile suppliers and vehicle manufacturers. Companies occupied with fusing devices, semiconductors, trunk circuits and electrical and/or electronic consumers will find this book especially interesting.      Automotive News ,
