BUILDING A SPORTSCAR EXTERIOR TO CLASS-A SURFACING STANDARDS TUTORIAL Serdar Hakan DÜZGÖREN, PREFACE INTRODUCTION TO CLASS A SURFACING Class A surfacing is to produce mathematical surfaces to the most exacting standard Once completed the A Class surface is the final output of styling design These surfaces are the Master for making the tools that produces the product itself Class A surfacing is one of the most complex and tedious 3D computer modeling tasks you can do Class A surface development occurs in the final phase of a project when constraints are much tighter to adhere to Modeling under these conditions is very hard without adoption of certain surface basics rules 3D computer modeling is still based on the knowledge and skill set of the individual user Therefore productivity and surface quality is user dependent The surfacing task can begin from the scan of a physical model as in this tutorial but it can also start from 2D sketch or verbal input In most cases it is the continuation of a concept 3D digital model Most of the time you will also need to be aware of and include flanges draft angles tool split lines and other engineering constraints In the tutorial these are not included To include them would put even more constraints on the modeling surfacing itself This tutorial demonstrates only one small part of class A surfacing but a very important element of creating good quality surfaces When you are starting a project or a part always take some time to think how you will build this before you start It is not a good idea to rush in the beginning of a project To be successful and to achieve that right quality in the time given you need a strategy Without this you can find yourself in a corner from which you can never escape a dead end These points below are in my opinion the most important basic rules to succeed It is very important to have a strategy on methodology surface layout and surface construction Always try to build the surfaces to allow easy modification Keep the surfaces as simple as possible Always try to build to an intersection By following these basic rules you have come a long way to succeeding in your modeling Good luck SolidWorks 2013 for Designers Prof. Sham Tickoo, 2013-01-25 Consists of 1028 pages of heavily illustrated text covering the following features of SolidWorks part design assembly design detailing and drafting blocks sheet metal modeling and surface modeling Cover **Future Cities** ECAADE (Association), 2010 Future Cities For the first time in human history more than 50% of the world's population lives in urban regions Cities are the largest most complex and most dynamic man made systems They are vibrant centers of cultural life and engines that drive the global economy Contemporary

cities are environmentally socially and economically unsustainable The quality of urban life is threatened by such factors as pollution rising temperatures limited resources congestion social inequalities aging of large sectors of the world population poverty informality crime and economic imbalances The overall planning of future cities is a challenge that can only be faced by interdisciplinary teams combining multitudes of backgrounds and expertise eCAADe Education and Research in Computer Aided Architectural Design in Europe eCAADe covers Europe Middle East North Africa and Western Asia and works in collaboration with the four other major international associations in the field ACADIA ASCAAD CAADRIA CAADFutures and SIGRADI eCAADe has collaborated with these associations to devise an exciting international Journal for the field called the International Journal of Architectural Computing or short IJAC
