**Specifications for Structural Concrete, ACI 301-05, with Selected ACI References** American Concrete Institute, 2005      **Guide for Concrete Floor and Slab Construction** American Concrete Institute. Committee 302, ACI Committee 302, 2004      *Mathematical Modeling of Concrete Mixture Proportioning* Ganesh Babu Kodeboyina, 2020-02-20

The primary aim of this book is to put together an understanding of the appropriate principles of ensuring performance and sustainability of concrete Broadly subdivided into three parts first part contains the fundamental aspects introducing the constituent materials the concepts of concrete mixture designs and the mathematical formulations of the various parameters involved in these designs The second part is dedicated to discussing approaches and recommendations of American British and European bodies related to mathematical modelling Lastly it discusses perceptions and prescriptions towards both the performance assessment and insurance of the resulting concrete compositions      **Forensic Structural Engineering Handbook** Robert Ratay, 2009-11-05 The Most Complete and Up to Date Resource on Forensic Structural Engineering Thoroughly revised and featuring contributions from leading experts this definitive handbook offers comprehensive treatment of forensic structural engineering and expert witness delivery From exploring the possible origins of errors through investigating and analyzing failures to working with the legal profession for assigning responsibilities Forensic Structural Engineering Handbook Second Edition covers every important topic in the field The design and construction process Design and construction safety codes standards and regulations Standard of care and duty to perform First steps and legal concerns after a failure Engineering investigation of failures Origins and causes of failures Loads and hazards Design errors construction defects and project miscommunication Defects deterioration and durability Mechanisms and analyses of failures in steel concrete masonry timber and temporary structures building envelope and structural foundations Litigation and dispute resolution The expert consultant and witness      **Self-consolidating Concrete, Applications for Slip Form Paving** Kejin Wang, 2005 Over consolidation is often visible as longitudinal vibrator trails in the surface of concrete pavements constructed using slip form paving Concrete research and practice have shown that concrete material selection and mix design can be tailored to provide a good compaction without the need for vibration However a challenge in developing self consolidating concrete for slip form paving SF SCC is that the new SF SCC needs to possess not only excellent self compactibility and stability before extrusion but also sufficient green strength after extrusion while the concrete is still in a plastic state The SF SCC to be developed will not be as fluid as the conventional SCC but it will 1 be workable enough for machine placement 2 be self compacting with minimum segregation 3 hold shape after extrusion from a paver and 4 have performance properties strength and durability compatible to current pavement concrete The overall objective of this project is to develop a new type of SCC for slip form paving to produce more workable concrete and smoother pavements better consolidation of the plastic concrete and higher rates of production Phase I demonstrated the

feasibility of designing a new type of SF SCC that can not only self consolidate but also have sufficient green strength In this phase a good balance between flowability and shape stability was achieved by adopting and modifying the mix design of self consolidating concrete to provide a high content of fine materials in the fresh concrete It was shown that both the addition of fine particles and the modification of the type of plasticizer significantly improve fresh concrete flowability The mixes used in this phase were also found to have very good shape stability in the fresh state Phase II will focus on developing a SF SCC mix design in the lab and a trial of the SF SCC in the field Phase III will include field study performance monitoring and technology transfer

### **Development and Implementation of Lightweight Concrete Mixes for KDOT Bridge**

**Applications** Sarah Jo Grotheer,2009 As of 2005 23% of the bridges in the Kansas infrastructure are classified as structurally deficient or functionally obsolete according to the ASCE Infrastructure Report Card ASCE 2008 One alternative to replacing the entire bridge structure is replacing only the superstructure with lightweight concrete This option is more economical for city county and state governments alike Replacing the superstructure with lightweight concrete can oftentimes allow the bridge rating to be upgraded to higher load capacities or higher traffic volumes Furthermore lightweight concrete can be used initially in a bridge deck to provide reduced weight and a lower modulus of elasticity therefore lower cracking potential The Kansas Department of Transportation is interested in the potential benefits of using lightweight aggregate concrete in Kansas bridge decks and prestressed bridge girders This research project used three types of lightweight aggregate to develop lightweight concrete mixtures for a bridge deck and for prestressed bridge girders Two of the lightweight aggregates were expanded shale obtained locally from the Buildex Company One deposit was located in Marquette Kansas and the other in New Market Missouri The third lightweight aggregate source was expanded slate obtained from the Stalite Company in North Carolina Aggregate properties including absorption gradation and L A Abrasion were evaluated Over 150 lightweight concrete mixtures were created and tested and several mix design variables such as water to cement ratio cement content and coarse to fine aggregate ratio were evaluated From these results optimized bridge deck and optimized prestressed concrete mixtures were developed for each type of lightweight aggregate Special concerns for lightweight aggregate concrete are addressed These optimized concrete mixtures were then tested for KDOT acceptability standards for the concrete properties of compressive strength tensile strength modulus of elasticity freeze thaw resistance permeability alkali silica reactivity drying shrinkage and autogenous shrinkage All concrete mixtures performed satisfactorily according to KDOT standards In addition an internal curing effect due to the moisture content of the lightweight aggregate was observed during the autogenous shrinkage test

**Development of Performance Properties of Ternary Mixtures** ,2011 This research project is a comprehensive study of how supplementary cementitious materials SCMs can be used to improve the performance of concrete mixtures This report summarizes the findings of the Laboratory Study on Concrete phase of this work The earlier paste and mortar phase of this work considered several sources of each type of SCM fly ash slag and silica fume so that the material variability issues could be addressed Several different sources of portland cement and blended cement were also used in the experimental program This phase of the research used an experimental matrix of 48 different mortar and concrete mixtures which were identified in the earlier work as potential ternary mixtures that could benefit department of transportation DOT goals for long lasting transportation bridges and pavements This report contains test results from durability testing on mortar and concrete containing ternary cementitious materials and standard coarse and fine aggregates Limited testing was also conducted on select mixtures for performance in hot and cold climates to determine the potential to design ternary mixtures in adverse conditions
