intended for your home business RV vehicle or boat The book is written by experts holding master s degree in electronics and is intended for those who cannot get started or are utterly confused Grab the book *Ultimate Solar Power Design Guide Less Theory More Practice* and get your solar powered home RV vehicle boat or business today While reading the book you will discover that our approach to sizing a solar system is just the opposite to the currently prevailing ones We prefer to give you lots of fast and simple step by step universal design methods applicable to all cases accompanied with many sizing examples starting from very simple solar power systems and finishing with the design of the more sophisticated off grid solar power system Thanks to this approach you will be capable of designing any solar power system or tailor the sizing methods according to your own needs The book provides 3 general approaches Business sizing simple and fast design but not too accurate for every case Basic sizing not so fast but more accurate and Advanced sizing more accurate but not so fast You may choose one of the general approaches depending on the type of system you are going to use For example the fastest business case approach could be used for sizing simple solar systems for outdoor activities It may be even accurate enough for sizing small solar systems for RV vehicles and boats The basic and the more accurate advanced approach are best suited for designing off grid and grid tied solar electric systems Grab the book *Ultimate Solar Power Design Guide Less Theory More Practice* Now
