INTRODUCTION

The Infinity Zone System consists of several intelligent communicating components which includes the Infinity Zone Control (or User Interface), Smart Sensors, Damper Control Module, variable speed furnace or FE fan coil, 2-stage AC or HP and Infinity Packaged Products, which continually communicate with each other via a four-wire connection called the ABCD bus. Commands, operating conditions, and other data are passed continually between components over the ABCD bus. The result is a new level of comfort, versatility, and simplicity.

All Infinity furnaces or fan coils are variable-speed and multi-stage for maximum flexibility, efficiency, and comfort. They support controlled ventilation, humidification, dehumidification, and air quality control. Either an Infinity (communicating) or a standard 24VAC controlled outdoor unit may be used.

When using conventional outdoor units, the Infinity furnace or fan coil provides the 24 volt signals needed to control them. Also, the Infinity Damper Control Module (P/N SYSTXCC42C01) allows connection of a Carrier HRV or ERV without the need for a separate wall control.

All system components are controlled through the wall mounted Infinity Zone Control, which replaces the conventional thermostat and provides the homeowner with a single wall control for all features of the system.
