However, despite over 90% of the world's international trade being conducted by sea, often very little is known about this subject by either party. This unique text provides a clear and comprehensive introduction to the principal elements involved in the management of marine cargo and the carriage of goods by sea. Not only does it analyse key theories and debates in the maritime freight sector, it is equally instructive on practice and logistics. Furthermore, the book provides a thorough guide to the roles and responsibilities of all parties involved in this dynamic industry. This second edition has been fully revised and updated to incorporate the very latest changes in cargo management legislation and procedures, including Offshore oil and gas supply management, The revised INCOTERMS 2010, Tramp shipping and spot cargo trading, Project cargo management, Dry and liquid bulk cargo management, The IMDG Code and the marine carriage of dangerous and hazardous goods, Cabotage, Salvage, Risk management and best practice.
