Computed Radiation Imaging Esam M A Hussein, 2011-05-27 Computer assisted imaging with radiation x and gamma rays is an integral part of modern medical diagnostic practice This imaging technology is also slowly finding its way into industrial applications Although the technology is well developed there is a need for further improvement to enhance image quality reduce artifacts minimize patient radiation exposure compete with and complement other imaging methods such as magnetic resonance imaging and ultrasonics and accommodate dense and large objects encountered in industrial applications Scientists and engineers attempting to progress this technology are faced with an enormous amount of literature addressing the imaging problem from various view points This book provides a single source that addresses both the physical and mathematical aspects of the imaging problem in a consistent and comprehensive manner Discusses the inherent physical and numerical capabilities and limitations of the methods presented for both the forward and inverse problems Provides information on available Internet resources and software Written in a manner that makes it readable by physicists mathematicians engineers and computer scientists avoids as much as possible the use of specialized terminology without clear introduction and definition

Human-Machine Interface Technology Advancements and Applications Ravichander Janapati, Usha Desai, Shrirang Ambaji Kulkarni, Shubham Tayal, 2023-09-22 Human Machine Interface Technology

Advancements and Applications focuses on analysis design and evaluation perspectives in HMI technological breakthroughs and applications. It covers a wide range of ideas, methodologies, approaches, and instruments to give the reader a thorough understanding of the field's current academic and industry practice and debate. Physical, cognitive, social, and emotional factors are all considered in the work, which is exemplified by key application fields such as aerospace, automobile, medicine, and defense. This book covers AI and machine learning methodologies as well as biological signals and HMI applications. Nanotechnology, user interface design, and interactive systems are also featured. The MATLAB approach to signal processing applications is also included. This book discusses advances in the field of human-machine interfaces and provides practical knowledge in biomedical signal processing, AI, and machine learning. It discusses augmented reality, virtual reality-based HMI applications. It examines advances in nanotechnology, user interface design, and interactive systems. This book is intended to serve as a research guide that will both inform readers about the fundamentals of HMI from academic and industrial perspectives and provide a glimpse into how human-centered designers such as engineers and human factors specialists will attempt to design and develop human-machine systems in the future.

Image Restoration Aymeric Histace, 2012-04-04. This book represents a sample of recent contributions of researchers all around the world in the field of image restoration. The book consists of 15 chapters organized in three main sections: Theory, Applications, Interdisciplinarity. Topics cover some different aspects of the theory of image restoration, but this book is also an occasion to highlight some new topics of research related to the emergence of some original imaging devices. From this arise some real challenging problems related to image reconstruction, restoration, that open the way to some new fundamental scientific questions closely related with the world we interact with.

Processing Technologies for Milk and Milk Products Ashok Kumar Agrawal, Megh R. Goyal, 2017-09-07. The demand for quality milk products is increasing throughout the world. Food patterns are changing from eating plant protein to animal protein due to increasing incomes around the world, and the production of milk and milk products is expanding with leaps and bounds. This book presents an array of recent developments and emerging topics in the processing and manufacturing of milk and dairy products. The volume also devotes a special section on alternative energy sources for dairy production along with solutions for energy conservation. With contributions from leading scientists and researchers in the field of dairy science and technology, this valuable compendium covers innovative techniques in dairy engineering, processing methods, and their applications in dairy industry, energy use in dairy engineering, sources, conservation, and requirements. In line with the modern industrial trends, new processes and corresponding new equipment are reviewed. The volume also looks at the development of highly sensitive measuring and control devices, which have made it possible to incorporate automatic operation with a high degree of mechanization to meet the huge demand of quality milk and milk products. *Processing Technologies for Milk and Milk Products: Methods, Applications, and Energy Usage* will be a valuable resource for those in those involved in the research and production of milk and milk products.

Biometric Data in Smart Cities Stepan

Bilan, Mykola Bilan, Ruslan Motornyuk, Serhii Yuzhakov, 2021-07-18 In modern conditions of the development of intelligent systems to solve the problems of smart cities more and more attention is paid to the construction of distributed intelligent systems which based on a network of sensors and specialized calculators help residents and visitors of the city in real time to solve a whole range of complex problems that arise in an urban environment In a smart city much attention is paid to the processing of biometric information that comes from biometric sensors distributed throughout the city Such biometric systems are multimodal and allow you to control the general condition of a person and also help a person to move around the city and predict events within the city This book describes methods for processing biometric information in a smart city environment The theoretical foundations of building a biometric multisensor network which allows you to create a unified urban biometric community are considered The theoretical foundations of the parallel shift technology and the Radon transformation on cellular automata with a hexagonal covering are presented On the basis of these technologies methods of biometric identification by gait parameters and the geometric shape of the auricle are described which are effectively used in a smart city A method for tracking dynamic changes in the state of a smart city in real time is considered Models of behavior of colonies of living organisms their formation movement and interaction are described on the basis of the technology of cellular automata with active cells Models of behavior of active cells in meeting with unwanted cells and models of combining and destruction of active cell colonies are also described This book is intended for undergraduate graduate students and specialists working and conducting research in the field of biometric information processing as well as in the development and construction of distributed intelligent systems
