Long, 1990 *Integrated Circuit Design* Xiaokun Yang, 2024-11-20. This textbook seeks to foster a deep understanding of the field by introducing the industry integrated circuit IC design flow and offering tape out or pseudo tape out projects for hands-on practice, facilitating project-based learning (PBL) experiences. *Integrated Circuit Design: IC Design Flow and Project Based Learning* aims to equip readers for entry-level roles as IC designers in the industry and as hardware design researchers in academia. The book commences with an overview of the industry IC design flow with a primary focus on register transfer level (RTL) design, the automation of simulation and verification, and system-on-chip (SoC) integration. To build connections between RTL design and physical hardware, FPGA field-programmable gate array synthesis and implementation is utilized to illustrate the hardware description and performance evaluation. The second objective of this book is to provide readers with practical hands-on experience through tape out or pseudo tape out experiments, labs, and projects. These activities are centered on coding format, industry design rules, synthesizable Verilog designs, clock domain crossing, etc., and commonly used bus protocols, arbitration, handshaking, etc., as well as established design methodologies for widely adopted hardware components including counters, timers, finite state
