**Digital Dreams: Exploring the Computer as an Art Medium** Harry Borgman, 2004-10-14 Harry Borgman's professional career has spanned many fields including graphic design, cartooning, and illustration. He was art director on the Chevrolet account at Campbell Ewald advertising agency and the Chairman of the Advertising Department at the Society of Arts and Crafts, now the College for Creative Studies. He has written several art technique books for Watson-Guptill Publications. Dover Publications recently reprinted his book *Pen and Pencil Drawing Techniques*. For many years he worked as a freelance artist in Detroit, New York, and Paris, France. As a painter, he works in the watercolor and acrylic mediums and is also very active as a sculptor doing wood carvings as well as wood and metal constructions. Recently he has been experimenting with the computer medium, currently creating photomontages and collages on the computer for a proposed exhibition.

**Digital Art Evolution** Marcus Tesla, 2025-01-05 *Digital Art Evolution* presents a comprehensive exploration of how technology has revolutionized artistic creation from the mid-20th century to today's digital age. The book masterfully weaves together three critical narratives: the shift from analog to digital tools, the birth of new artistic mediums through technological advancement, and artificial intelligence's growing influence on creative practices. Through carefully documented case studies and interviews with over 50 artists and technologists, the book illuminates how digital tools have not just changed the way art is made but have fundamentally transformed our understanding of creativity and authorship. The journey begins with the earliest computer-generated artworks of the 1960s, providing crucial context for understanding both artistic movements and technological milestones. The narrative progresses through three main sections, examining the transition to digital tools, exploring born-digital art forms like virtual reality and interactive installations, and investigating emerging technologies such as machine learning and blockchain in art. This structure allows readers to grasp how each technological advancement has shaped artistic possibilities and challenged traditional creative paradigms. What sets this book apart is its balanced approach to examining both opportunities and challenges in digital art creation, making complex technical concepts accessible while maintaining scholarly depth. Whether discussing generative art, virtual reality, or AI-created artwork, the book serves as both a historical record and a forward-looking analysis of artistic innovation. For artists, technology professionals, and educators, it offers valuable insights into the intersection of creative expression and technological advancement while providing practical applications for readers to explore in their own creative endeavors.

**Digital Dreams** Paul Kunkel, 1999 For the past half-century, the Sony Corporation has been highly successful at tapping the seductive nature of consumer electronics. Around the globe, their products are recognized as symbols of cutting-edge technology and innovative design, making Sony the undisputed leader in high-tech and one of the most recognized brand names in the world. This book takes an unprecedented look inside the world's most influential design center and their products many never before published for the next millennium. With nearly 250 industrial designers, graphic packaging, and

logotype designers user interface specialists and Web designers working in offices from Tokyo to San Francisco to Cologne the Sony Design Center is responsible for nearly 2 000 new products concepts packaging schemes and design strategies every year By shaping the most pivotal technologies of our time the Design Center exerts a greater influence on popular culture and current trends in industrial and graphic design than any other single entity From publisher description

Pearson, Laura Allen, 2016-11-11 *Drawing Futures* brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. *Drawing Futures* will present a compendium of projects, writings, and interviews that critically reassess the act of drawing and where its future may lie. *Drawing Futures* focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name taking place at The Bartlett School of Architecture UCL in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.
