The MultiCapital Scorecard Martin P. Thomas, Mark W. McElroy, 2016-12-01 For decades now organizations have been struggling to find the best way to address their social and environmental responsibilities alongside their economic obligations In other words they want to know how best to effectively manage their operations based on a triple bottom line 3BL one that reflects social environmental and economic performance Recently an international standard for integrated reporting has emerged that in principle emphasizes the importance of managing toward a triple bottom line But it fails to provide specific guidance on how to do so Organizations have been left to their own devices to respond How should 3BL management actually be done In this book sustainability and performance experts Martin Thomas and Mark McElroy introduce the world's most advanced 3BL performance accounting methodology The MultiCapital Scorecard It is the first context based integrated measurement management and reporting system And it can help corporations public institutions and other organizations answer the question they should be asking themselves for every aspect of their operations How much is enough for us to be sustainable The answers set internal performance standards against which operations and their impacts can be measured Nothing less will do The MultiCapital Scorecard describes this open source methodology which consists of a structured quantitative measurement and reporting system that complies with international standards for 3BL integrated measurement and reporting Moreover the MultiCapital Scorecard is designed to help organizations assess their own 3BL performance in their own contexts with context based metrics of their own choosing An eminently practical management aid for integrated thinking it can be tailored to any organization's needs The authors

also describe how and why businesses are gradually shifting from managing impacts on only one type of capital economic to managing impacts on multiple types They also provide detailed examples of worked reports showing how organizations might develop and quantify the interim and long term goals to meet their obligations to their employees community shareholders and the environment The examples also show how an organization can use the Multicapital Scorecard methodology to assess their progress in meeting those goals and convey that progress to their stakeholders

Property Rights in Outer Space Matthew Johnson,2024-05-28 This book explores the role of private mining rights in the utopian imaginary of space colonisation It presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off world frontier Written in an engaging style the book investigates a novel case study in the history of capitalism and the commons the emergence of a nascent space mining industry undergirded by a contentious legislative framework In 2015 the US passed laws that would recognise the claims of US corporations to own and sell space resources This unilateral act of pre emptive law making would appear to contravene the terms of the UN Outer Space Treaty 1967 which declared that the exploration and use of outer space should be for the benefit of all mankind and not subject to national appropriation Using this central dynamic between privately held mining rights and outer space as a global commons Matthew Johnson constructs an historical sociology of space mining from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity The anticipatory expansion of private property claims beyond the Earth both resonates with and problematises the terrain of political history such as the tensions between states and markets public law and private power the commons and exclusive property The emerging cosmopolitics of off world private property mirrors and is often explicitly embedded within neoliberal geopolitics prompting urgent questions about how we can reaffirm principles of democracy and common heritage in the international laws of Earth and space This book is compelling reading for anyone interested in the social study of space law economics technology politics and property rights
