Environmental Bioengineering Lawrence K. Wang, Joo-Hwa Tay, Stephen Tiong Lee Tay, Yung-Tse Hung, 2010-06-25 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Since pollution is a direct or indirect consequence of waste production the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the above three questions The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken

Clean-In-Place for Biopharmaceutical Processes Dale A. Seiberling, 2007-10-15 An invaluable source instruction on the principles instrumentation design implementation operation and maintenance of an effective clean in place system CIP this guide illustrates best practices and successful applications of CIP in both pharmaceutical and biotechnology facilities Offering reader friendly descriptions of the various types of equipment and materials found in typical CIP processes Clean In Place For Biopharmaceutical Processes will take the guess work out of CIP development and illustrate all one needs to know for the establishment and optimal

functioning of a CIP system *Future Crops and Processing Technologies for Sustainability and Nutritional Security*
Soumya Ranjan Purohit, Vasudha Sharma, Meena Kumari, Kasi Muthukumarappan, Joanna Kane-Potaka, 2024-09-06 Our current food system faces challenges across the board from ensuring food security and reducing environmental impact to managing costs and minimizing waste Fortunately cutting edge food processing technologies play a critical role in paving the way for a more sustainable future Taking a two track approach *Future Crops and Processing Technologies for Sustainability and Nutritional Security* presents sustainable technologies and emerging crops that are capable of ensuring nutritional security There are various crops that are nutritious but under utilized Crops covered in the book are those that are climate resilient and exhibit less use of water and zero discharge to environment such as millets and legumes like chickpea groundnuts and pigeon pea **KEY FEATURES** Provides a comprehensive literature review on the opportunities and challenges in achieving sustainability and nutritional security Presents compatible relevant crops to address both sustainability and nutritional security Discusses the emerging technologies crops food products to justify sustainability and potential to ensure nutritional security This book also provides information on all aspects related to the processing and use of sustainable technologies and crops The use of technologies like 3D printing novel drying method high pressure processing high voltage treatments and the proper combination of conventional methods are addressed **Anaerobic Co-Digestion of**

Lignocellulosic Waste Luis Isidoro Romero García, Carlos José Álvarez Gallego, Luis Alberto Fernández Güelfo, 2021-09-02 Some terms such as eco friendly circular economy and green technologies have remained in our vocabulary because the truth is that mankind is altering the planet to put its own subsistence at risk Besides for rationalization in the consumption of raw materials and energy the recycling of waste through efficient and sustainable processes forms the backbone of the paradigm of a sustainable industry One of the most relevant technologies for the new productive model is anaerobic digestion Historically anaerobic digestion has been developed in the field of urban wastes and wastewater treatments but in the new challenge its role is more relevant Anaerobic digestion is a technologically mature biological treatment which joins bioenergy production with the efficient removal of contaminants This issue provides a specialized but broad in scope overview of the possibilities of the anaerobic digestion of lignocellulosic biomass mainly forestry and agricultural wastes which is expected to be a more promising substrate for the development of biorefineries Its conversion to bioenergy through anaerobic digestion must solve some troubles the complex lignocellulosic structure needs to be deconstructed by pretreatments and a co substrate may need to be added to improve the biological process Ten selected works advance this proposal into the future
