Modelling the helix A cut-out 3-D model of DNA

Aim

This stunning cut-out 3-D model of DNA can be used to learn about the structure of B-DNA.

Equipment and materials

Needed by each person or group

- Nucleotide templates, copied onto card from the following pages
- Scissors
- Bodkin or strong needle, for punching holes through card
- Paper glue
- Drinking straws
- Fine string
- Crayons (if coloured prints of the following pages are not used)
- OPTIONAL: Sharp craft knife and cutting board

Procedure

1. Make several copies of the nucleotide templates on card. Ten nucleotide pairs are required for a complete turn of the double helix. To see the major and minor grooves in the double helix clearly, the model needs to have at least 16 nucleotide pairs.
2. If colour copies have not been used, colour in the card appropriately. The colours that are often used in sequencing markers for DNA bases are: Cytosine=Blue; Guanine=Yellow; Adenine=Green; Thymine=Red.
3. Cut out the nucleotide pairs around the thicker, outer lines. Make two small cuts into the card by the phosphate groups where indicated. OPTIONAL: Use a sharp craft knife to make cuts above the deoxyribose molecules where shown.
4. Carefully punch a small hole in each cut-out where shown. This will be the axis of the DNA model through which the string will be threaded. Don't make these holes too big!
5. Fold the sugar-phosphate 'backbones' where indicated by dotted lines. These folds must be made in the directions shown on the accompanying pages. Take care not to make left-handed DNA!

* The model upon which this one is based was brought to the author's attention by Dr Cheong Kam Khoo of the Singapore Science Centre. We have no idea of its origins other than a cryptic copyright note '© V.R.P. 1959'. If you are V.R.P., please contact us as we'd like to give you credit for this magnificent model, which evidently pre-dated most peoples' interest in DNA.

Bioprospecting of Indigenous Bioresources of North-East India Jubilee Purkayastha, 2016-08-16 This work is a comprehensive information on the indigenous bioresources of North Eastern India with the scope of bioprospecting for discovery and commercialization of new sources and products and long term ecological balance The exploration conservation and sustainable utilization of bioresources of world s Megabiodiversity Hotspots are undeniable North Eastern India is a recognised biodiversity hot spot where the evolutionary forces are at its optimum making this region as centre of origin for many species Although little bit exploratory studies have been conducted in this part of the globe but a scientific exploitation of the bioresources is almost lacking Unscientific exploitation and overexploitation without proper knowledge of the bioresources may lead to imbalanced ecosystem of this mega diversity region At the same time very less exploration and exploitation will hamper biodiversity based development Today unscientific dramatic changes are underway in this region Human activities are changing degrading and destroying the bioresources in an unplanned manner Scientific bioprospecting of the bioresources will boost the economy while ensuring conservation This book offers comprehensive information about various levels of bioprospecting of the gene pool of this Indo Burma Mega Biodiversity Hot Spot the North East India which is endowed with huge biodiversity potential for exploration and exploitation for the benefit of humankind Also this book

highlights the less and merely explored part of the indigenous biodiversity of North East India with explanation towards their better sustainable exploitation for benefit of the people economy and environment The novelty of the book lies in expert coverage of the bioresources of this mega diverse region including plants microbes insects etc with provisions for their sustainable scientific utilization This book portrays North East India as a melting pot of bioresources which are little explored and also those resources which are still to be explored The book mainly highlights the bioprospecting approaches for North East Indian bioresources and thus it make itself a unique one in filling the knowledge gap that is there regarding the bioprospecting of the biodiversity of this special region on the earth The book concludes by the ecotourism potential of this region The target audiences for this book include biodiversity economists who are working on technology and bioresource management issues and especially on biotechnology and biodiversity development economists addressing the issues of bioresources in developing countries These people may be in academia in government in non governmental organizations and in private companies The other target audiences group is policy scholars in government public sectors who are interested in issues of biotechnology IPRs and biodiversity In addition scholars experts in both development studies and resource management studies form another group of target audiences Also the book will be useful for the interaction between developed and developing nations regarding the issues of biodiversity and bioprospecting as North Eastern India is the hub of Biodiversity
