*A.I. Artificial intelligence, introduction to the issues and current trends* Pavel Bartoš, 2023-01-01 Artificial Intelligence AI often referred to by the acronym Artificial Intelligence is a fascinating and dynamically developing field that has far reaching implications for various sectors of human activity At its core it is the simulation of human intelligence in computer systems AI is capable of learning planning problem solving speech recognition visual perception and many other cognitive functions that were previously considered the exclusive domain of human thought

**Digital Ecosystems: Interconnecting Advanced Networks with AI Applications** Andriy Luntovskyy, Mikhailo Klymash, Igor Melnyk, Mykola Beshley, Alexander Schill, 2024-07-29 This book covers several cutting edge topics and provides a direct follow up to former publications such as Intent based Networking and Emerging Networking bringing together the latest network technologies and advanced AI applications Typical subjects include 5G 6G clouds fog leading edge LLMs large scale distributed environments with specific QoS requirements for IoT robots machine and deep learning chatbots and further AI solutions The highly promising combination of smart applications network infrastructure and AI represents a unique mix of real synergy Special aspects of current importance such as energy efficiency reliability sustainability security and privacy telemedicine e learning and image recognition are addressed too The book is suitable for students professors and advanced lecturers for networking system architecture and applied AI Moreover it serves as a basis for research and inspiration for interested professionals looking for new challenges

**Advanced Topics in Artificial Intelligence** Norman Y. Foo, 1999-11-26 This book constitutes the refereed proceedings of the 12th Australian Joint Conference on Artificial Intelligence AI 99 held in Sydney Australia in December 1999 The 39 revised full papers presented together with 15 posters were carefully reviewed and selected from more than 120 submissions The book is divided in topical sections on machine learning neural nets knowledge representation natural language processing belief revision adaptive algorithms automated reasoning neural learning heuristics and applications

**Diffusions in Architecture: Artificial Intelligence and Image Generators** Matias del Campo, 2024-02-28 DIFFUSIONS IN ARCHITECTURE A guide to diffusion models and their impact on design with insight on how this novel artificial intelligence technology may disrupt the industry Diffusions in Architecture Artificial Intelligence and Image Generators delves into the impact of Generative AI models and their effect on architecture design and aesthetics The book presents an in depth analysis of how these new technologies are revolutionizing the field of architecture and changing the way architects approach their work The architects presented in the book focus on the application of specific AI techniques and tools used in generative design such as Diffusion models Dall E2 Stable Diffusion and MidJourney It discusses how these techniques can generate synthetic images that are both realistic and imaginative creating new possibilities for architectural design and aesthetics Twenty two leading designers and theorists offer their insights providing disciplinary depth by covering the full impact of these learning tools on architecture

**Advanced Topics in Computational Number**

**Theory** Henri Cohen, 2012-10-29 The computation of invariants of algebraic number fields such as integral bases discriminants prime decompositions ideal class groups and unit groups is important both for its own sake and for its numerous applications for example to the solution of Diophantine equations The practical completion of this task sometimes known as the Dedekind program has been one of the major achievements of computational number theory in the past ten years thanks to the efforts of many people Even though some practical problems still exist one can consider the subject as solved in a satisfactory manner and it is now routine to ask a specialized Computer Algebra System such as Kant Kash liDIA Magma or Pari GP to perform number field computations that would have been unfeasible only ten years ago The very numerous algorithms used are essentially all described in A Course in Computational Algebraic Number Theory GTM 138 first published in 1993 third corrected printing 1996 which is referred to here as CohO That text also treats other subjects such as elliptic curves factoring and primality testing It is important and natural to generalize these algorithms Several generalizations can be considered but the most important are certainly the generalizations to global function fields finite extensions of the field of rational functions in one variable over a finite field and to relative extensions of number fields As in CohO in the present book we will consider number fields only and not deal at all with function fields **The Routledge**

**Companion to Smart Design Thinking in Architecture & Urbanism for a Sustainable, Living Planet** Mitra Kanaani, 2024-11-11 This comprehensive companion surveys intelligent design thinking in architecture and urbanism investigates multiple facets of smart approaches to design thinking that augment the potentials of user experiences as well as his/her physical and mental interactions with the built environment Split into six paradigms this volume looks at the theoretical and historical background of smart design smart design methodologies and typologies smart materials smart design for extreme weather and climatic regions as well as climate change issues and side effects smart mobility and the role of digital technologies and simulations in architectural and urban design Often at odds with each other this volume places emphasis on smart design for various typologies and user groups emphasizing on advancements in form making and implementation of technology for healthy and sustainable living environments Written by emerging and established architects planners designers scientists and engineers from around the globe this will be an essential reference volume for architecture and urban design students and scholars as well as those in related fields interested in the implications various facets and futures of smart design *Neural Networks and Deep Learning* Charu C. Aggarwal, 2023-06-29 This book covers both classical and modern models in deep learning The primary focus is on the theory and algorithms of deep learning The theory and algorithms of neural networks are particularly important for understanding important concepts so that one can understand the important design concepts of neural architectures in different applications Why do neural networks work When do they work better than off the shelf machine learning models When is depth useful Why is training neural networks so hard What are the pitfalls The book is also rich in discussing different applications in order to give the practitioner a flavor

of how neural architectures are designed for different types of problems Deep learning methods for various data domains such as text images and graphs are presented in detail The chapters of this book span three categories The basics of neural networks The backpropagation algorithm is discussed in Chapter 2 Many traditional machine learning models can be understood as special cases of neural networks Chapter 3 explores the connections between traditional machine learning and neural networks Support vector machines linear logistic regression singular value decomposition matrix factorization and recommender systems are shown to be special cases of neural networks Fundamentals of neural networks A detailed discussion of training and regularization is provided in Chapters 4 and 5 Chapters 6 and 7 present radial basis function RBF networks and restricted Boltzmann machines Advanced topics in neural networks Chapters 8 9 and 10 discuss recurrent neural networks convolutional neural networks and graph neural networks Several advanced topics like deep reinforcement learning attention mechanisms transformer networks Kohonen self organizing maps and generative adversarial networks are introduced in Chapters 11 and 12 The textbook is written for graduate students and upper under graduate level students Researchers and practitioners working within this related field will want to purchase this as well Where possible an application centric view is highlighted in order to provide an understanding of the practical uses of each class of techniques The second edition is substantially reorganized and expanded with separate chapters on backpropagation and graph neural networks Many chapters have been significantly revised over the first edition Greater focus is placed on modern deep learning ideas such as attention mechanisms transformers and pre trained language models
