Babsonchart with the Interpretations of the Barometer Letter, 1924 **Development and Comparison of Advanced Reduced-basis Methods for the Transient Structural Analysis of Unconstrained Structures** David M. McGowan, 1993 The development of two advanced reduced basis methods the force derivative method and the Lanczos method and two widely used modal methods the mode displacement method and the mode acceleration method for transient structural analysis of unconstrained structures is presented Two example structural problems are studied an undamped unconstrained beam subject to a uniformly distributed load which varies as a sinusoidal function of time and an undamped high speed civil transport aircraft subject to a normal wing tip load which varies as a sinusoidal function of time These example problems are used to verify the methods and to compare the relative effectiveness of each of the four reduced basis methods for performing transient structural analyses on unconstrained structures The methods are verified with a solution

obtained by integrating directly the full system of equations of motion and they are compared using the number of basis vectors required to obtain a desired level of accuracy and the associated computational times as comparison criteria
