Cancer Immunotherapy Tyler J. Curiel, 2012-11-07 This work will provide a historical perspective on tumor immunotherapy discuss fundamental mechanisms of failed tumor rejection look at passive strategies to boost anti tumor immunity as well as have an in depth look at active strategies to boost anti tumor immunity *Bidirectional Gene Promoters* Fumiaki Uchiyama, 2022-11-25 Recent studies in human genetics and in silico analyses have revealed that a number of genes are head head orientated with other genes or non coding RNAs The expression of regulatory element containing 5 upstream regions of gene pairs are referred to as bi directional promoters and are thought to have a key role in biological regulatory mechanisms For example tumor suppressor protein encoding TP53 and BRCA1 genes are head head bound with WRAP53 and NBR2 respectively DNA repair factor encoding ATM and PRKDC DNA PKcs genes have bidirectional partner NPAT and MCM4 respectively Surveillance of the human DNA database has revealed that the numbers of DNA repair mitochondrial function immune response associated genes are bound with other genes that are transcribed to opposite direction The observations may encourage us to investigate in the molecular mechanisms how DNA repair mitochondrial function immune response associated genes are regulated by bidirectional promoters Not only protein coding genes but also quite a few ncRNAs which play important roles in various cellular events are transcribed under the regulation of the bidirectional promoters More importantly we know that dysregulation in the promoter activity and transcription initiation of genes might cause human diseases Provides an overview of the process of transcription Explains why there so many bidirectional promoters present in human genomes Covers how the diverse biological functions of non coding RNAs ncRNAs are controlled

Biology-Driven Targeted Therapy of Pediatric Soft-Tissue and Bone Tumors: Current Opportunities and Future Challenges Thomas G. P. Grünewald, Simone Fulda, 2016-04-05 Recent advances in the understanding of the biological basis of pediatric soft tissue and bone tumors especially owing to the advent of omics technologies have led to an exponential increase in the current knowledge on the genetic and cellular patho mechanisms that drive these diseases This offers the unprecedented opportunity to develop and implement targeted therapies such as monoclonal antibodies small molecules oncolytic viruses and immunotherapies in standard and or personalized treatment regimens However to date only a few examples document a successful translation of discoveries from the bench to the bedside Recent international expert congresses further emphasize the urgent need for a more rapid and especially more successful translational process Hence we strongly believe that a Frontiers Research Topic aiming at this aspect would fit just in time and be relevant for a broad readership This Frontiers Research Topic intended to provide a platform for active and interdisciplinary discussion to summarize current state of the art knowledge on all basic research and translational aspects in pediatric soft tissue and bone tumors and to offer new perspectives on how to further promote and accelerate the translational process It comprises high quality original articles and timely reviews Diastolic Dysfunction: Unveiling the Genetic, Molecular, and Clinical

Sulforaphane and Isothiocyanates in Health Paul Licciardi, Francesco Grassi, Tom C. Karagiannis, Diego A. Moreno, Jed William Fahey, Nadia Mazarakis, 2025-03-06 Although much of the research on sulforaphane (SF) is associated with its ability to activate the Keap1/Nrf2 pathway, it exhibits a range of other important biological effects, e.g. inflammation modulation through NF- κ B downregulation, infection control, immune system selectivity, antibacterial, cell cycle control, displaying reasonable consistency in preclinical and nutritional interventions. The dose-response data appear to be reasonably consistent by disease state and tissue type and indicate that biologically relevant quantities of SF and other isothiocyanates can be provided in practical food or supplement-based delivery systems. Other aspects of their bioavailability, including potential synergistic, additive or antagonistic effects coming from combined treatments or food matrix effects, are not well understood at the clinical level.

Cancer Theranostics, Second Edition Xiaoyuan Chen, Jingjing Zhang, Stephen Wong, 2025-09-30 *Cancer Theranostics, Second Edition* provides updates on new molecular imaging probes and techniques for early detection of cancer and describes molecular imaging-guided cancer therapy. Discussions also include nanoplateforms incorporating both cancer imaging and therapeutic components as well as clinical translation and future perspectives. New to this edition is the inclusion of recent developments and a streamlined structure that leads the reader through the content more intuitively, from problem to solution. More illustrations of different forms of cancer theranostics are included, and this edition also contains completely new content on DNA and RNA theranostics. In addition, new case studies are featured. This new edition is published in time to meet the needs of medical researchers in a comprehensive manner encompassing diagnostics, in vivo imaging and its use for image-guided therapy and a variety of other miscellaneous subjects. This book is a must-have for all research scientists, medical physicists and physician scientists in cancer, experimental therapeutics and molecular imaging. Describes the identification of novel biomarkers to advance molecular diagnostics of cancer. Includes the latest developments in liquid biopsy, new imaging techniques such as magnetic particle imaging, artificial intelligence, different types of image-guided interventions and drug delivery and new forms of theranostics including the most recent mRNA-based theranostics. Gives various novel forms of cancer interventions and treatments. Provides clinical translation of different types of cancer.
