

Lesson 11: Unknown Angle Proofs—Proofs of Known Facts

Classwork

Opening Exercise

A *proof* of a mathematical statement is a detailed explanation of how that statement follows logically from other statements already accepted as true.

A *theorem* is a mathematical statement with a proof.

Discussion

Once a theorem has been proved, it can be added to our list of known facts and used in proofs of other theorems. For example, in Lesson 9, we proved that *vertical angles are of equal measure*, and we know (from earlier grades and by paper cutting and folding) that *if a transversal intersects two parallel lines, alternate interior angles are of equal measure*. How do these facts help us prove that corresponding angles are equal in measure?

In the diagram to the right, if you are given that $\overline{AB} \parallel \overline{CD}$, how can you use your knowledge of how vertical angles and alternate interior angles are equal in measure to prove that $x = w$?

You now have available the following facts:

- Vertical angles are equal in measure.
- Alternate interior angles are equal in measure.
- Corresponding angles are equal in measure.
