

You need to determine where to place the beams so that the chairs are fastened to the roller coaster at a height of 20 feet.

- Write the equation you would need to solve to find the horizontal distance each beam is from the origin. (10 points)

$$x = (20)^2 - (20)^2 \quad (\text{Horizontal Distance})$$

- Algebraically solve the equation you found in step 3. Round your answer to the nearest hundredth. (10 points)

$$x = (20)^2 - (20)^2 \\ x = 0$$

- Explain where to place the two beams. (10 points)

The beam goes 10.00 ft to the left of the center and another 10.00 ft to the right of the center.
The beams are 20.00 ft apart.

Model 2: Another plan to secure the roller coaster involves using a cable and strut. Using the center of the half-circle as the origin, the concrete strut can be modeled by the equation $y = -\sqrt{25x^2 + 16}$ and the mathematical model for the cable is $y = -x^2 - 4$. The cable and the strut will intersect.

Special Functions Richard Beals, Roderick Wong, 2010-08-12 The subject of special functions is often presented as a collection of disparate results which

are rarely organised in a coherent way This book answers the need for a different approach to the subject The authors main goals are to emphasise general unifying principles coherently and to provide clear motivation efficient proofs and original references for all of the principal results The book covers standard material but also much more including chapters on discrete orthogonal polynomials and elliptic functions The authors show how a very large part of the subject traces back to two equations the hypergeometric equation and the confluent hypergeometric equation and describe the various ways in which these equations are canonical and special Providing ready access to theory and formulas this book serves as an ideal graduate level textbook as well as a convenient reference
