**Applied Asset and Risk Management** Marcus Schulmerich, Yves-Michel Leporcher, Ching-Hwa Eu, 2014-10-20. This book is a guide to asset and risk management from a practical point of view. It is centered around two questions triggered by the global events on the stock markets since the middle of the last decade: Why do crashes happen when in theory they should not? How do investors deal with such crises in terms of their risk measurement and management, and as a consequence, what are the implications for the chosen investment strategies? The book presents and discusses two different approaches to finance and investing: i.e. modern portfolio theory and behavioral finance, and provides an overview of stock market anomalies and historical crashes. It is intended to serve as a comprehensive introduction to asset and risk management for bachelor's and master's students in this field, as well as for young professionals in the asset management industry. A key part of this book is the exercises to further demonstrate the concepts presented, with examples and a step-by-step business case. An Excel file with the

calculations and solutions for all 17 examples as well as all business case calculations can be downloaded at extras.springer.com
