Systems Biology: Simulation of Dynamic Network States Bernhard Ø. Palsson, 2011-05-26 Biophysical models have been used in biology for decades but they have been limited in scope and size In this book Bernhard Palsson shows how network reconstructions that are based on genomic and bibliomic data and take the form of established stoichiometric matrices can be converted into dynamic models using metabolomic and fluxomic data The Mass Action Stoichiometric Simulation MASS procedure can be used for any cellular process for which data is available and allows a scalable step by step approach to the practical construction of network models Specifically it

can treat integrated processes that need explicit accounting of small molecules and protein which allows simulation at the molecular level The material has been class tested by the author at both the undergraduate and graduate level All computations in the text are available online in MATLAB and Mathematica workbooks allowing hands on practice with the material

Dynamic Modeling Bruce Hannon, Matthias Ruth, 2013-04-19 The book uses STELLA software to develop simulation models thus allowing readers to convert their understanding of a phenomenon to a computer model and then run it to yield the inevitable dynamic consequences built into the structure Part I provides an introduction to modeling dynamic systems while Part II offers general modeling methods Parts III through VIII then apply these methods to model real world phenomena from chemistry genetics ecology economics and engineering A clear approachable introduction to the modeling process of interest in any field where real problems can be illuminated by computer simulation
