

Guide To Developing High-Quality, Reliable, and Valid Multiple-Choice Assessments

Marcy H. Towns*

Department of Chemistry, Purdue University, West Lafayette, Indiana 47906, United States

ABSTRACT: Chemistry faculty members are highly skilled in obtaining, analyzing, and interpreting physical measurements, but often they are less skilled in measuring student learning. This work provides guidance for chemistry faculty from the research literature on multiple-choice item development in chemistry. Areas covered include content, item, and response construction; item analysis; item difficulty; and item discrimination. The goal is to help faculty construct high-quality, reliable, and valid multiple-choice items to evaluate students' ability to meet learning objectives and to demonstrate proficiency in the content domain under study. Using item-writing guidelines based upon the research literature allows faculty to create assessments that are reliable and valid, with greater ability to discriminate between high- and low-achieving students.

INTRODUCTION

The design and interpretation of assessments of student learning is a responsibility of chemistry faculty. Developing familiarity and expertise about assessment—vocabulary, design, and interpretation—has been the topic of recent editorials and research articles in the *Journal*.^{1–3} The aim of this work is to provide guidance for chemistry faculty in developing multiple-choice items leading to reliable and valid assessments. If exams are thought of as a tool for measurement of student learning, then the goal should be to develop the best tools possible.

The purpose of assessment is for faculty to learn what students know or can do. The purpose of a specific task is to provide formative (homework, quizzes, or exams given during the semester) or summative (exams or final projects at the end of the semester) feedback to faculty and students on the students' ability to achieve specific learning objectives. In this work it is assumed that faculty have specific, measurable learning objectives for each chapter, unit, module, and/or experiment in their course.

The terms *reliability* and *validity* are used to describe assessment tasks (and occasionally items) and frequently occur in the lexicon of assessment. *Reliability* refers to a task's reproducibility (or its precision). *Validity* refers to the degree to which the task measures what it purports to measure (or its accuracy). Thus, reliable and valid assessments allow faculty to measure in a precise and accurate way the students' ability to meet specific learning objectives.

There are many different ways to assess student learning and a wide literature base to peruse and use as resources. Faculty may be familiar with Bloom's Taxonomy and the revised taxonomy that uses a knowledge dimension and cognitive process dimension to generate 24 different types of possible assessment tasks of varying complexity.^{4–6} Computer-based assessment, electronic

homework platforms, and technology platforms such as BeSocratic⁷ facilitate a wide variety of assessment tasks. Kathleen Scalise's "Computer-Based Assessment: Intermediate Constraint" Questions and Tasks for Technology Platforms" is a rich resource for the development of questions linked to electronic delivery.⁸ These resources can help faculty consider what kind of knowledge they would like to assess (factual, conceptual, procedural, or metacognitive), at what level (recall, understanding, application, and analysis, etc.), and how they would like to do it (multiple-choice questions, essay questions, drawings, or projects, etc.). To determine if students have achieved a learning objective, faculty make decisions about what evidence they will accept predicated upon their own assessment priorities, class size, level of the course, and time available for grading.

This work gleans from the research and practice literature guidelines for the development of multiple-choice items. Given that faculty may use such items in homeworks, quizzes, or exams to assess student learning, it is sensible to collect what is known about item writing into a work that is useful to chemistry faculty.

MULTIPLE-CHOICE QUESTIONS

Multiple-choice questions are a traditional type of assessment task for students that can be used on exams or quizzes. Such items have the advantage of ease of scoring, especially if scoring is automated. The item begins with a question or stem, and the correct answer is selected from a list of possible response options. There is one correct response and the other options are called distractors.
