

Introductory Guide to Using a DHR Rheometer

1. Turn on the computer controller.
2. Turn on the air supply to the rheometer.

Pressure requirements for all DHR models: 30 psi

3. Remove the black bearing lock by holding it in place while turning the draw rod knob at the top in a counter-clockwise direction. Once the bearing lock is removed, make sure that the spindle rotates freely.

NOTE: If air supply is interrupted while bearing lock is off, **DO NOT TURN the DRIVE SHAFT**; this will cause damage to the radial bearing. Locate another gas source, attach it to the gas port on the rheometer, and then attach bearing lock while the radial air bearing is floating.

4. Turn on the Power to Rheometer

Switch the power button, located on the rear of the electronics control box, to the *ON* position.

NOTE: If step 4 is performed before step 3, an alarm will sound and the instrument controller display will read "optical init. fail". At this point, turn off the power and perform step 3.

5. When using a Peltier control device, please ensure that the water supply is turned on. If using a pump and tank system, ensure that the water is clean and the pump is fully submerged.
6. When the instrument has finished the system check, start the instrument control software: *Start>Programs>TA Instruments TRIOS>TRIOS*. Then click "connect" to begin communication to your rheometer. You can also double-click on the TRIOS icon shortcut located on your PC desktop.

7. Choose the Control Panel icon from the Home ribbon, , to make certain that communication has been established between the computer and the instrument. If communication is not established, the control panel values will

Dhr Job Study Guide
