1. Understand what dementia is

1.1 Explain what is meant by the term 'dementia'

Dementia is a disorder of the mental processes caused by brain disease or injury. It is marked by memory disorders, personality changes and impaired reasoning.

1.2 Describe the key functions of the brain that are affected by dementia.

Key functions that are affected by dementia are: movement like they might be a lot slower in their reactions then what they used to be, Personality they could be nice one minute then can completely turn, Balance they might not be as steady on their feet as they used to be, short term memory which could mean that they might be stuck in the past and does not realise that their life has changed also their speech could be affected like they might not be able to explain what they are feeling as they cant find the right words to express themselves.

1.3 Explain why depression, delirium and age related memory impairment may be mistaken for dementia.

Depression, delirium and age related memory impairment might be mistaken for dementia because they all have similar symptoms. The only difference is that depression and delirium can be treated by anti-depressants.

2. Understand key features of the theoretical models of dementia.

2.1 Outline the medical model of dementia.

The medical model of dementia relates to the clinical approach for example how changes occur within the brain and managing the condition with medication.

2.2 Outline the social model of dementia.

The social model of dementia is about the person and how it affects the individuals. It seeks to understand the emotions and behaviors of the person with dementia.

2.3 Explain why dementia should be viewed as a disability.

Dementia should be viewed as a disability because people with dementia are not aware of requirements for living. They can forget to do basic things like eating food or drinking. Considering these facts that they can not act in the manner of a responsible adult makes them disabled.
