Way to Lean Leadership and answer the questions How can I apply this in my organization What concrete actions can I take to begin the journey of becoming a lean leader How can I spread this learning to all parts of the organization What critical tools are needed to turn the theory to practice This book adds examples from over twenty years of experience by Dr Liker in working with companies outside of Toyota The book treats you as a student who will be actively engaged in developing lean leader skills as you read It acts as a tutorial for beginning the journey The Problem-Solving Kata as a Tool for Culture Change Mohammed Hamed Ahmed Soliman,2022-11-09 Some businesses have reduced staff and made resource cuts to survive the global economic downturn while others have improved business practices and culture Unfortunately there is still a difference between successful and less successful businesses in terms of culture adaptability people management and process management In organisations like Toyota which in contrast to its rivals has a mindset of process improvement culture drives competitive advantage Other businesses might benefit from Toyota s teachings by changing their routines for behaving and thinking in order to increase staff performance **Creating a One-Piece Flow and Production Cell: Just-in-time Production with Toyota's Single Piece Flow** Mohammed Hamed Ahmed Soliman,2022-12-01 One piece flow also known as continuous flow is considered the ultimate lean goal It describes how items are efficiently moved from one stage of the process to the next by designing the workflow around the requirements of the product To get from point A to point B is the objective Any waste or halt in production is equivalent to the stones and dams that direct the flow of water We examine our layouts devices procedures rules cultures and knowledge while attempting to implement flow to see what might be causing these flow blocking factors Continuous flow aids in waste reduction Because there is harmony and rhythm between each stage of the process wastes are eliminated from the system This enables each team member to provide value rather than produce waste Processing waste is decreased because there is naturally less rework or overprocessing there is only as much work done as the customer is prepared to pay for and there is only one accepted technique to complete the task no bad processing **Manufacturing Wastes Stream: Toyota Production System Lean Principles and Values** Mohammed Hamed Ahmed Soliman,2022-10-02 In order to cut costs during the economic downturn many businesses are implementing abstinence policies This could mean laying off workers and cutting some wages In fact those actions might only work for a short time Unless the company implements a culture of continuous improvement and alters its method of operation the situation may recur and become even worse This brings us back to the purpose for which the Toyota production system was developed Waste is anything that uses resources but offers the customer nothing in return Most activities are waste or muda and can be divided into two categories Although type one muda does not provide value it is inescapable given the production assets and technologies available today An illustration would be checking welds for safety that type we also call necessary non value added activity Type two muda does not add value and can be quickly eliminated An illustration is a process in a process village with disconnected phases that may be swiftly converted into a cell where

unnecessary material moves and inventory are no longer necessary A very small portion of all value stream activities truly generate value as perceived by the client The most effective way to boost business performance is to stop doing the numerous unnecessary things Toyota Production System Concepts Mohammed Hamed Ahmed Soliman,2023-12-06

Toyota Motor Corporation made a system to make good products save money and make things faster by using less waste TPS has two main parts just in time and jidoka It is often shown as a house image To improve TPS and keep it running well we use a process called PDCA or the scientific method We do this by doing the same tasks over and over again and making small improvements called kaizen TPS was created by Taiichi Ohno who managed production at Toyota after World War II Ohno began using TPS at Toyota in the 1950s and 1960s starting with machining work Then he started using it in other parts of the company and also shared it with other suppliers in the 1960s and 1970s Outside of Japan the spread of Toyota and General Motors partnership called NUMMI began in California in 1984 The concepts of just in time JIT and jidoka were created before the war A long time ago Sakichi Toyoda created the idea of jidoka and he also started the Toyota group of companies He added a machine to his looms that would stop the loom if a thread broke This improved the quality of things and let people concentrate on more important tasks instead of just checking machines for quality Over time this basic idea became a part of every machine every production line and every Toyota operation Kiichiro Toyoda who is the son of Sakichi and the founder of Toyota came up with the idea of JIT Just in Time in the 1930s He said Toyota should not have too many cars sitting unsold and they should try to work with their suppliers to make the same number of cars all the time Ohno was in charge of making JIT a special system to control how much we make and to avoid making too much TPS was well known after The Machine That Changed the World was published in 1990 This book took five years to make and it was researched by the Massachusetts Institute of Technology The researchers at MIT found that TPS was faster and more efficient than regular mass production It was a very different way of doing things so they called it lean production

The Seven Deadly Wastes and How to Remove Them from Your Business Mohammed Hamed Ahmed Soliman ,2014-09-07 This book discusses the seven deadly wastes muda in the value stream process It presents the cost of each waste its effect on the process and how it can be eliminated to increase profitability Waste removal increases the profitability of any business Processes are classified into value added and waste The seven deadly wastes that could exist in any manufacturing process originated in Japan and are defined in the Toyota production system TPS The main goal became removing them For each waste there is a strategy to remove or eliminate it What is less likely is that managers will know how any of these issues are affecting them and increasing costs To remove each waste you have to understand where it comes from why it exists and how it affects your business In the economic recession many companies are taking abstinence procedures to reduce costs This might include layoff labors and reducing some wages Actually those actions might work for only a short period Afterwards the situation may return and in worse shape unless the company changes its way of doing things including enacting a culture of

continuous improvement This puts us back to why the Toyota production system has been created Hoshin Kanri Mohammed Hamed Ahmed Soliman, 2016-07-08 Hoshin Kanri has been used successfully by Toyota and other top tier companies in Japan and the United States to achieve strategic business and lean goals The underlying power of a successful hoshin kanri process relays on how Toyota creates an environment of continuous improvement Toyota is a strong business because of its people and people are the value of its system This book focuses more on people rather than the process Management behavior motivation core organizational values and teamwork leadership development and culture change are the real factors of any business success Akio Toyoda said after several recent recalls that the rate of the company's growth was higher than the rate of the development of its people Successful businesses need to invest in the people and put the people before the process Read this book and you will see why a gap remains between successful and less successful companies in terms of process management people management and the adaptability of culture
