MC2K IP Administrative Communication System

Description

Bogen's MC2K IP, with MCPCA3 Processor Card, is a combination of Bogen Multicom and VoIP modules that enables an educational facility to provide district-wide overhead paging to locations within a facility or across a campus, without running new lines.

The Bogen MC2K IP integrates seamlessly with Voice over IP gateways (VoIP) to provide paging over the existing IP LAN / WAN Ethernet networks. Now, a school district can make a district-wide announcement or page employees across a campus more efficiently. They can even page remote school locations located thousands of miles away (e.g., universities with overseas campuses). The Bogen MC2K IP Administrative Communication System is designed specifically for the needs of schools, and other institutional and industrial facilities. It combines private telephone communication with a full-featured sound and program distribution system, including media control. It also provides master clock control, an all-call feature, and a feature for dialing the outside 911 Emergency Services for increased security and quick response. Calls to outside 911 Emergency Services can be dialed directly from any telephone in the system. Upon dialing 911, an alert will be sent to all the Administrative telephones in the system along with the ID of the call station.

The MC2K IP system is microprocessor controlled and fully field-programmable for remarkable versatility and dependability. The Multicom 2000 IP system can be supplied as a self-contained, wall mounting system, or in a vertical rack-mounted configuration. The wall-mounted version can accommodate up to 120 stations in increments of 24. The rack version can provide up to 240 stations and can include additional amplification and/or Bogen Multicom 2000 or Multi-Graphic system components and available options for increased versatility.

A unique card frame design eliminates external amplification equipment for basic systems. A single microprocessor card controls overall system function. For each 24 stations, a circuit card pair provides signal routing and a 20-watt

program amplifier and 12-watt intercom amplifier. An associated relay module connects each station to the intercom or program bus. The system permits up to 8 simultaneous intercom communications with staff station loudspeakers and 8 unrestricted telephone communications, with simultaneous distribution of program material to stations not involved in a two-way conversation.

The system software supports these basic station types: Staff consisting of loudspeaker with call in and optional handset; Enhanced Staff with a DTMF dialing telephone set and optional loudspeaker; Administrative or Enhanced Administrative with DTMF dialing display telephone (and optional loudspeaker), and a Media Control Box; or any combination of the above. Each type of station can be further organized into levels, which determine the ability to perform different system functions. Staff and enhanced staff stations can make emergency calls that can activate an emergency announce link if the call is unanswered. System functions include 8 administrative page zones, 240 hard-wired page zones, options for 99 programmable page zones, 8 time zones with 8 bell schedules, and 1024 timed events.

A unique modular program source interface offers a choice of three program sources (e.g., microphone, tuner, etc.). The selection of the program source and its distribution to any or all stations or zones is guided by the menu display on a designated administrative telephone. Any station equipped with a keypad dialing phone can turn program material on or off at their location.

Telephonic features include call forwarding, call transfer and conference calling, as well as selective ability to bump or join conversations in progress. Administrative stations can also place calls on hold. A telephone interface option lets you receive and make outside calls on up to 16 incoming lines (stations can be restricted in their ability to make outgoing calls). All system control and programming can be accomplished using a telephone keypad.
