

### Classification

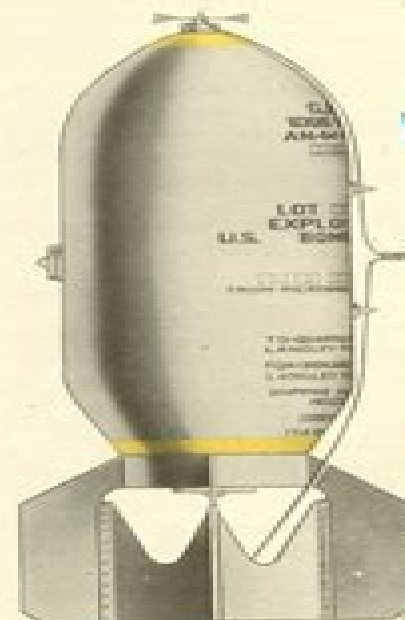

Bombs are normally classified or typed according to the purpose for which they are designed and the type of filler used.

**General Purpose bombs** cause destruction by blast and vacuum pressures when they explode above ground, by earth shock when they explode below ground. These bombs are of the AN-M series and resemble each other closely. They differ mainly in size, weight, and weight of explosives.

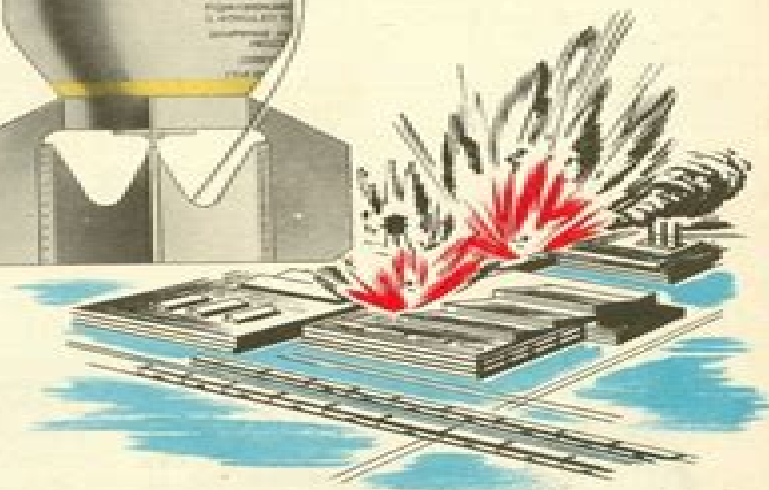

**Light Case bombs**, as the name implies, have such light cases that about 80% of the total weight is explosive. The 4000-lb. block buster is a light case bomb and is used to raze areas equal to a city block or more.

**Armor-Piercing bombs** are used against heavily armored battleships, and against structures of stone or reinforced concrete. They have an extra heavy case and a sharp nose. High explosive comprises about 5 to 15% of their weight.

In order to penetrate the deck armor of modern battleships, armor-piercing bombs must be dropped from a bombing altitude of at least 15,000 feet.
