Student Exploration: Levers

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: effort, first-class lever, fulcrum, lever, load, mechanical advantage, second-class lever, third-class lever

Prior Knowledge Questions

(Do these BEFORE using the Gizmo.)

1. A **lever** is a rigid plank or bar that pivots on a **fulcrum**. Look at the lever in the picture. Where would you push on the lever to lift the rock?

With the force the rock provides, I would push the empty plank in order to lift it.

2. Where are some places that you see levers in everyday life?

The lever is sometimes referred to as a seesaw in the park.

Gizmo Warm-up

In the *Levers* Gizmo, the strongman tries to lift animals by pushing down or pulling up on the lever. The force of his push or pull is the **effort**. The weight of the animal is the **load**. Both forces are measured in newtons.

- You can move the fulcrum to the left or right by dragging it.
- You can drag animals to any spot on the lever.
- You can move the strongman by dragging him.
- You can change the strongman's **Effort** with the slider.

1. Drag the pig to the lever. Try to arrange the lever so that the strongman can lift the pig. What did you do so that he could lift it?

I require the men to exert all their strength in raising the pig, which weighs roughly 1000N. Since the pig weighs 2400N, however, that is still insufficient to lift it; thus, in order for the man to lift the pig, I moved it to position 1.5.

2. Did the strongman pull up or push down to lift the pig?

The strong man lifted the pig by pulling up.

3. How much effort was needed to lift the pig?
