Throck Watson,2009-09-25 Biomedical Applications of Mass Spectrometry Edited by Clarence H Suelter and J Throck Watson This unusual text is not simply a compilation of mass spectrometric methods but provides instead insight into specific approaches mass spectroscopists use when applying the technique to a variety of biological problems Each chapter provides guidance in using the appropriate methods for isolating and purifying the compound class prior to mass spectrometric analysis Covered in depth are the mass spectrometry of carbohydrates peptide sequencing by mass spectrometry mass spectrometry of nucleic acid components and mass spectrometry in pharmacology This definitive look at a growing facet of the science is an essential reference for biochemists biological chemists bioanalytical chemists and students 1990 0 471 61303 7 396 pp

Biodegradable Polymers for Biomedical Applications , volume III Liqun Yang,Jianshe Hu,Shuai Jiang,Yeh-Hsing Lao,Yang Yao,2025-02-03 Biodegradable polymers are an important class of polymers due to their good biodegradability and biocompatibility The research and application of biodegradable polymers in biomedical fields have attracted extensive attention especially in that of drug delivery tissue engineering and regenerative medicine Biodegradable polymers can be broken down in vivo through enzymatic and non enzymatic degradation For biomedical applications the chemical and mechanical properties degradation mechanism and products and other factors of the polymers play a critical role in their degradation behaviors and application Thus many essential issues must be considered in the design of biodegradable polymers for biomedical application For instance sufficient mechanical strength is important for scaffold materials to provide three dimensional space for cells and its degradation rate must be compatible with tissue regeneration When used as the drug carriers for some implants controllable degradation rate is also required for the biodegradable polymers to avoid

explosive release besides good permeability More importantly the biodegradable polymers must have good biocompatibility to avoid adverse reactions such as inflammation in the body and the degradation products must be non toxic and should not be accumulated in the body To meet such requirements the chemical and physical as well as the degradation properties of polymers must be properly tailored

Sustainable Material for Biomedical Engineering Application Wan Safwani Wan Kamarul Zaman,Nurul asma Abdullah,2023-08-01 Sustainable Material for Biomedical Engineering Application discusses current interdisciplinary approaches in the development of materials and their derivatives that are sustainable for biomedical engineering application Recent advancement of materials research has shown to have great impact on biomedical and clinical applications With potential for sustainability the materials discussed and illustrated in this book may have the ability to increase and contribute to wider therapeutic options for patients On the other hand with the advancement in materials technology they also have positive impacts in terms of reproducibility and more cost effective manufacturing solutions for biomedical engineering industry Some of the main aspects covered in this book are utilisation of human waste food waste and green technology approach for materials in biomedical engineering applications such as tissue engineering 3D printing and biosensing A team of experts from various disciplines share recent advances that provide details and integrates different approaches to sustainable materials development This book is intended for academicians researchers students and industrial players in the field of materials and biomedical engineering
