## **Cas Alan Turing Delalande Liberge:**

The Case of Alan Turing Eric Liberge, Arnaud Delalande, 2016-10-03 Alan Turing subject of the Oscar winning 2014 film *The Imitation Game* was the brilliant mathematician solicited by the British government to help decipher messages sent by Germany's Enigma machines during World War II. The work of Turing and his colleagues at Hut 8 created what became known as the bombe which descrambled the German navy's messages and saved countless lives and millions in British goods and merchandise. Despite his heroics however Turing led a secret life as a homosexual haunted by the accidental death of a young love he got briefly engaged to Joan Clarke a fellow cryptanalyst until he told her the truth. After a young man with whom he was involved stole money from him he went to the police where he confessed his homosexuality he was charged with gross indecency and only avoided prison after agreeing to undergo chemical castration. Tragically he committed suicide two years later by ingesting cyanide through a poisoned apple. The particulars of Turing's achievements were only made known in 2012 following the release of once classified papers. Authors Liberge and Delalande used this information to create a biography that is scientifically rigorous yet understandable for the lay reader. It's also a meticulous depiction of World War II and an intimate portrayal of a gay man living in an intolerant world. Delving deeper into Turing's life than *The Imitation Game* this graphic novel is a fascinating portrait of this brilliant complicated and troubled man. *How to Embrace*

*Academic Failure* Tara Brabazon, 2025-07-15 This compelling book explores current attitudes towards failure in academia. Tara Brabazon argues that success and failures are rarely linked and instead failure can be harnessed as both a diagnostic and a literacy to improve research integrity, authenticity, accountability and consciousness. **Enigma Myth Deciphered**

Marek Grajek, 2024-11-07 This unique new volume analyses source documents both previously known and recently declassified generating an extremely broad and original synthesis about Enigma. The author uses his experience as a cryptologist to fill in gaps in the sources or to correct misguided interpretations also adding the passion of a journalist drawing a vivid picture of the characters and the story. As a Pole he presents this story through the lens of the fate of the Polish mathematicians who were the first to break the cipher as early as 1932 and laid the foundations for the subsequent Allied success. The book's coverage ranges from the mathematical foundations of codebreaking through the complex fates of the people and organisations involved in the attacks on the Enigma ciphers the impact of decrypts on the fate of the major campaigns of the Second World War to the role that wartime cryptology and codebreakers played in the birth of digital civilisation. The Polish mathematicians story is presented in the full context of the struggle with the cipher including the complex interplay between codebreakers military commanders and politicians of the UK US Poland France and the Third Reich. By looking at events through the eyes of a cryptologist rather than solely as a historian the reader is given a glimpse into the backstage of the cryptologic workshop a better understanding of the scale and nature of the challenges codebreakers faced and insights into their responses to those challenges as well as the emotions dilemmas disappointments and triumphs.
