GENERAL INFORMATION

This section describes the electronic ignition system for the 3.3L and 3.5L engines used in LH vehicles.

The On-Board Diagnostics Section in Group 14 describes diagnostic trouble codes.

Group 0, Lubrication and Maintenance, contains general maintenance information for ignition related items. The Owner's Manual also contains maintenance information.

The 3.3L and 3.5L engines use a fixed ignition timing system. The distributorless electronic ignition system is referred to as the Direct Ignition System.

Basic ignition timing is not adjustable. The powertrain control module (PCM) determines spark advance. The system's three main components are the coil pack, crankshaft position sensor, and camshaft position sensor.

The crankshaft position sensor and camshaft position sensor are hall effect devices. The camshaft position sensor and crankshaft position sensor generate pulses that are the inputs to the PCM. The PCM determines crankshaft position from these sensors. The PCM calculates injector sequence and ignition timing from crankshaft position. For a description of both sensors, refer to Camshaft Position Sensor and Crankshaft Position Sensor in this section.

FIRING ORDER

The firing order of the 3.3L and 3.5L direct ignition system is 1-2-3-4-5-6 (Fig. 1).
